**Architecture & Design versus Consumerism** Ann Thorpe, 2012-06-14 The mentality that consumerism and economic growth are cure alls is one of the biggest obstacles to real sustainability but any change seems impossible unthinkable Our contemporary paradox finds us relying for our well being on consumer driven economic growth that we actually can't afford not in environmental economic or social terms Although architecture and design have long been seen as engines for consumerism and growth increasing numbers of designers are concerned about the problems resulting from growth But designers face a paradox of their own in scenarios of sustainable consumption where people consume or build significantly less what will be left for designers to do This book informed by recent research into the viability of a steady state economy sets an agenda for addressing the designer's paradox of sustainable consumption The agenda includes ways that architecture and design can help transition us towards a new kind of economy that prioritizes real wellbeing rather than economic growth Packed with examples and illustrations the book argues that taking action or activism is an important but so far underexplored way for architects and designers to confront consumerism The first chapters explore how economic growth and consumerism shape and are shaped by the professions of architecture product and landscape design and how we can understand the problem of consumerism as four main challenges that designers are already addressing The book maps out the main issues surrounding the development of metrics that designers and others can use to measure wellbeing instead of simply measuring economic growth The second half of the book looks at how design activism works and its connection to growth and consumerist issues These chapters examine how activist practices are financed highlight five specific methods that designers use in working for social change and investigate the power of these methods The book concludes with a consideration of what design's role might be in a post growth society

architecture product and landscape design and how we can understand the problem of consumerism as four main challenges that designers are already addressing The book maps out the main issues surrounding the development of metrics that designers and others can use to measure wellbeing instead of simply measuring economic growth The second half of the book looks at how design activism works and its connection to growth and consumerist issues These chapters examine how activist practices are financed highlight five specific methods that designers use in working for social change and investigate the power of these methods The book concludes with a consideration of what design's role might be in a post growth society

Questioning Architectural Judgment Steven A. Moore, Barbara B. Wilson, 2013-07-24 The book shines light on the problem of judgment particularly in the realm of architectural technics and the codes that regulate it The struggle to define sustainability and thus judge architecture through such lenses is but one dimension of the contemporary problem of judgment By providing the reader with an inherently interdisciplinary study of a particular discipline architecture it brings to the topic lenses that challenge the too frequently unexamined assumptions of the discipline By situating architecture within a broader cultural field and using case studies to dissect the issues discussed the book emphasizes that it is not simply a matter of designing better more efficient or more stringent codes to guide place making but a matter of reconstructing the boundaries of the systems to be coded The authors are winners of the EDRA Place Research Award 2014 for their work on the Green Alley Demonstration Project used in the book
