

Preparing Gasket Surfaces

CAUTION

Clean threads in the mounting holes are critical for tightening of the rear bolts, and the seal between the rear and manifold.

- Check all rear mounting holes in manifold for debris or excessive coating on threads.
- Bolts should enter completely into hole by hand. If not, run tap in holes to clear debris and coating.
- Use shop vacuum to remove debris from holes.

CAUTION

The gasket mounting surfaces must be clean and flat to ensure a correct seal between the rear and manifold. Carefully follow the steps below to ensure a good seal.

NOTE: Before proceeding, place shop towels in the manifold openings to prevent debris from entering the engine. When the cleaning process is done, use a shop vacuum to remove debris from the manifold, rear, and engine.
