Rössler,Vaclav Snasel,Ajith Abraham,2013-11-13 Prediction of behavior of the dynamical systems analysis and modeling of its structure is vitally important problem in engineering economy and science today

Examples of such systems can be seen in the world around us and of course in almost every scientific discipline including such exotic domains like the earth's atmosphere, turbulent fluids, economies, exchange rate and stock markets, population growth, physics, control of plasma, information flow in social networks and its dynamics, chemistry and complex networks. To understand such dynamics and to use it in research or industrial applications, it is important to create its models. For this purpose, there is a rich spectra of methods from classical like ARMA models or Box Jenkins method to such modern ones like evolutionary computation, neural networks, fuzzy logic, fractal geometry, deterministic chaos and more. This proceeding book is a collection of the accepted papers to conference Nostradamus that has been held in Ostrava, Czech Republic. Proceeding also comprises of outstanding keynote speeches by distinguished guest speakers Guanrong Chen, Hong Kong; Miguel A F Sanjuan, Spain; Gennady Leonov and Nikolay Kuznetsov, Russia; Petr Kodá, Czech Republic. The main aim of the conference is to create periodical possibility for students, academics and researchers to exchange their ideas and novel methods. This conference will establish forum for presentation and discussion of recent trends in the area of applications of various predictive methods for researchers, students and academics.

Intercontinental Transport of Air Pollution Andreas Stohl, 2004-06-08

Transboundary transport of air pollution has been a topic of scientific research for several decades and has also been addressed already by environmental policies. However, the importance of air pollution transport on the largest intercontinental scales has been recognized only recently. It was soon found that the meteorological and chemical processes involved in intercontinental pollution transport are distinctly different from those occurring during regional scale transport and thus new scientific methodologies are required for their study. In this book, leading scientists review the current state of knowledge in this emerging field of research, providing the reader with a process understanding of global scale transport and its influence on the atmosphere's chemical composition. Long range transport of anthropogenic pollution is contrasted with that of pollution produced by natural processes such as dust storms or forest fires. Furthermore, the prospects for international management of intercontinental transport of anthropogenic pollution are discussed.
