A Risk Management Strategy For Pcb Contaminated Sediments:

A Risk-Management Strategy for Pcb-Contaminated Sediments National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Remediation of PCB-Contaminated Sediments, 2001-05-07 This book provides a risk based framework for developing and implementing strategies to manage PCB contaminated sediments at sites around the country The framework has seven stages beginning with problem definition continuing through assessment of risks and management options and ending with an evaluation of the success of the management strategy At the center of the framework is continuous and active involvement of all affected parties particularly communities in the development implementation and evaluation of the management strategy A Risk Management Strategy for PCB Contaminated Sediments emphasizes the need to consider all risks at a contaminated site not just human health and ecological effects but also the social cultural and economic impacts Given the controversy that has arisen at many PCB contaminated sites this book provides a consistent yet flexible approach for dealing with the many issues associated with assessing and managing the risks at Superfund and other contaminated sites

contaminated site not just human health and ecological effects but also the social cultural and economic impacts Given the controversy that has arisen at many PCB contaminated sites this book provides a consistent yet flexible approach for dealing with the many issues associated with assessing and managing the risks at Superfund and other contaminated sites **A Risk-management Strategy for PCB-contaminated Sediments**, 2001 Strategies to Address Contaminated Sediments United States. Congress. House. Committee on Transportation and Infrastructure. Subcommittee on Water Resources and Environment, 2001 **Science policy council contaminated sediments science priorities.**, 2004 **Sediment Dredging at Superfund Megasites** National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Sediment Dredging at Superfund Megasites, 2007-10-30 Some of the nation's estuaries, lakes and other water bodies contain contaminated sediments that can adversely affect fish and wildlife and may then find their way into people's diets Dredging is one of the few options available for attempting to clean up contaminated sediments but it can uncover and re-suspend buried contaminants creating additional exposures for wildlife and people At the request of Congress EPA asked the National Research Council NRC to evaluate dredging as a cleanup technique The book finds that based on a review of available evidence dredging's ability to decrease environmental and health risks is still an open question Analysis of pre-dredging and post-dredging at about 20 sites found a wide range of outcomes in terms of surface sediment concentrations of contaminants some sites showed increases some no change and some decreases in concentrations Evaluating the potential long-term benefits of dredging will require that the U.S. Environmental Protection Agency step up monitoring activities before, during and after individual cleanups to determine whether it is working there and what combinations of techniques are most effective *Sediment Risk Management and Communication* Susanne Heise, 2007-03-12 In dynamic river systems effective and sustainable risk management of sediments, contaminants and their sources must be carried out on a river basin scale A diversity of interests and risk perceptions whether environmental, economical or personal as well as the broad variety of uses and functions of river systems can lead to conflicts and disagreements about how and where river systems should be managed This requires a transparent methodology to assess environmental risks in the river basin followed by a prioritisation of those sites where measures would yield the highest positive effect for the river basin and where financial resources could be allocated most efficiently However risk perceptions may only partially be influenced by scientific assessments of risk and often also depend on a variety of factors such as personal experience and confidence in institutions Risk managers must develop methods to balance technical and socioeconomic issues with the aim to reduce risks posed by sediments to environmental and economic resources to a level that is perceived as tolerable by society *Sediment Risk Management and Communication Vol 3* in the SEDNET mini series is based on discussions that were held in the working group on Risk Management and Communication which was one of 4 working groups within the European Demand Driven Sediment Research Network SedNet It aims to analyse the current

situation in Europe with regard to sediment risk management issues to draw conclusions from this analysis and to offer recommendations for sustainable risk management from basin to site specific scale This volume also available as part of a 4 volume set ISBN 0444519599 Discount price for set purchase A broad overview on sediment quality and impact assessment of pollutants Suitable for both newcomers to the field of sediment treatment and specialists alike Outlines practical examples of methods used in sediment quality analysis

Sediments Contamination and Sustainable Remediation Catherine N. Mulligan, Masaharu Fukue, Yoshio Sato, 2009-12-16 Although valuable resources in river basins and other aqueous environments sediments often receive much less attention from researchers policymakers and other professionals than other components of the ecosystem Until now Highlighting the important role that sediments play in the geoenvironment Sediments Contamination and Sustainable Remediation

Assessment and Remediation of Contaminated Sediments Danny Reible, Tomas Lanczos, 2007-01-21 Contaminated sediments pose some of the most difficult site remediation issues Contaminated sediments typically reside in spatially variable and dynamic systems subject to seasonal flow variations and episodic storm events The volume of sediments that must be managed at particular sites often exceeds one million cubic meters dwarfing many contaminated soil sites These sediments are also associated with equally daunting volumes of water and efforts to remove the contamination typically entrains even more water The environmental security of both NATO and partner countries is at risk due to the pervasive nature of sediment contamination of rivers lakes and harbors A NATO Advanced Research Workshop was convened in Bratislava in May 2005 to discuss current approaches to managing contaminated sediments and to identify research necessary to overcome outstanding problems In this text drawn from presentations and discussion of that workshop current approaches to the assessment and remediation of contaminated sediments will be discussed with the emphasis on in situ management Physical chemical and biological approaches for the assessment and remediation of sediments are all addressed Developing regulatory and strategic approaches are highlighted with a special emphasis on the potential for biological remediation for the management of contaminated sediments

Processes, Assessment and Remediation of Contaminated Sediments Danny D. Reible, 2013-07-20 The purpose of this book is to help engineers and scientists better understand contaminated sediment sites and identify and design remedial approaches that are more efficient and effective Contaminated sediment management is a difficult and costly exercise that is rarely addressed with easily identified and implemented remedies It is hoped that this book can help identify and implement management approaches that provide an optimal if not entirely satisfactory solution to sediment contaminant problems

Contaminated Soils, Sediments and Water Volume 10 Edward J. Calabrese, Paul T. Kostecki, James Dragun, 2006-11-28 Every spring the University of Massachusetts Amherst welcomes all Soils Conference Scientific Advisory Board members with open arms as we begin the

planning process responsible for bringing you quality conferences year after year With this homecoming of sorts comes the promise of reaching across the table and interacting with a wide spectrum of stakeholders each of them bringing their unique perspective in support of a successful Conference in the fall This year marks the 20 anniversary of what started as a couple of thoughtful scientists interested in developing partnerships that together could fuel the environmental cleanup dialogue Since the passage of the Superfund Law regulators academia and industry have come to realize that models that depend exclusively on command and control mandates as the operative underpinning limit our collective ability to bring hazardous waste sites to productive re use It is with this concern in mind that the Massachusetts Department of Environmental Protection privatized its cleanup program in 1993 spurring the close out of over 20 000 sites and spills across the Commonwealth to date in a manner that is both protective of human health and the environment while also flexible and responsive to varied site uses and redevelopment goals So we gather together again this year to hear our collective stories and share success and challenges just as we share stories at a family gathering Take a read through the stories contained in these proceedings
