**Aviation and Its Management** Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations education etc, one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines and runway safety management systems. This book is useful to aviation managers, educators, students and professionals interested in any of the above issues.

**Generative Systems and Intelligent Tutoring Systems** Sabine Graf, Angelos Markos, 2025-07-28 This book constitutes the refereed proceedings of the 21st International Conference on Intelligent Tutoring Systems ITS 2025 held in Alexandroupolis, Greece during June 2-6, 2025. The 21 full papers, 27 short papers and 5 posters included in this book were carefully reviewed and selected from 67 submissions. The papers are organized in the following topical conference tracks: Part I: Generative Tutoring Systems. The goal of this part is to show how new techniques inspired by artificial intelligence AI and new methods in education can improve learning, teaching and generate the capacity for knowledge acquisition and much more. Part II: Application areas, environments and techniques for AI systems. This part shows the progress of research investigating the different application areas such as education, health, techniques such as neural networks, data mining, natural language processing and environments such as games, virtual reality, cognitive robots for effective AI systems.

**Conditional Function Control of Aircraft** Andrey Vyacheslavovich Yakovlev, Andrey Sergeevich Istomin, Dmitry Alexandrovich Zatuchny, Yury Grigorievich Shatrakov, 2021-04-09 This book highlights the prevention of possible accidents and crashes of aircrafts by analyzing the many factors that affect such events. It includes the theoretical study of known ideas and concepts as well as a set of new methods and mathematical models. It contains factual information to investigate famous disasters and aviation accidents with aircrafts. The book proposes methods and models that can be the basis in developing guidance material for decision making by the flight crew and experts in air traffic control. Some of the contents presented in this book are also useful in the design and operation of data transmission systems of aircraft. The book is intended for

engineering and technical specialists engaged in the development manufacturing and operations of onboard radio electronic systems of aircraft and ground based radio engineering support for flights as well as graduate students and senior students of radio engineering specialties It is useful to researchers and managers whose activities are related to air traffic control
