40 Inquiry Exercises for the College Biology Lab A. Daniel Johnson, 2009 Drawing from the author's own work as a lab developer coordinator and instructor this one of a kind text for college biology teachers uses the inquiry method in presenting 40 different lab exercises that make complicated biology subjects accessible to major and nonmajors alike The volume offers a review of various aspects of inquiry including teaching techniques and covers 16 biology topics including DNA isolation and analysis properties of enzymes and metabolism and oxygen consumption Student and teacher pages are provided for each of the 16 topics

Crustacean Experimental Systems in Neurobiology Konrad Wiese, 2012-12-06 This book represents Part 2 of a venture started by distinguished neuroscientists to visualize and advertise the experimentally advantageous preparations of the crustacean nervous system The advantage is a combination of ease of dissection of key structures and the possibility of repeatedly accessing identified individual cells to measure the detailed response of the system to the experimentally imposed stimulus program Of course the neurosciences have to focus their research on the nervous system of mammals and man in order to understand the principles of function and their regulation if malfunctions occur This is in line with efforts to investigate nervous systems throughout the animal kingdom The specific potential of the encountered systems for exploratory research into hitherto unexplained functions of the brain may very well be a key to new insights The simply organized nervous system of crustaceans performs tasks of vital importance imposed on the organism Hence this system consists of a complete set of neural circuitry open for inspection and measurement by systematic investigation The first volume The Crustacean Nervous System contains exhaustive reports on experimental work from all sectors of neuroscience using crayfish and lobsters This second volume Crustacean Experimental Systems in Neurobiology contains excellent reviews on significant topics in neurobiology Each section is introduced by short texts written by the section editors of the Crustacean Nervous System More prominent authors explain their approach to understanding the brain using a selection of experiments involving visual orientation neuromuscular systems and identification of principles of neural processing
