The USDA serving guide.

Food For Thought

What's on the school menu today? French fries, chips, or baked potatoes? Believe it or not, a battle is being fought over what is on your school lunch tray. The U.S. Department of Agriculture is responsible for creating nutritional guidelines for school lunches and wants to limit the amount of white potatoes and other starchy vegetables to one cup a week, or two servings. This proposal affects everyone from the potato farmer to the cafeteria worker to the students eating the tater tots. Not surprisingly, all of these people have differing opinions...

Eat Your Broccoli

Supporters of limiting potato servings argue that potatoes are often served fried or topped with high calorie items like sour cream, cheese, and bacon. They also worry that when students are given a choice between French fries or something like carrots or green beans, they too often choose the fries. Poor eating choices made early in life lead to obesity and numerous long-term health problems like diabetes and heart disease.

Did you know?

The school cafeteria is the largest restaurant in the country, serving over 31 million students every single day.

More Please...

Serving sizes in school lunches are based on grade level and age.

Would you like fries with that?

Opponents of the proposed change offer that potatoes are full of nutritional value, and aren't always served in unhealthy ways. Fries can be baked rather than fried, and baked potatoes can be topped with healthier alternatives, like salsa. They also argue that potatoes are a cheap and plentiful option for a vegetable serving and that limiting potatoes would increase school lunch costs across the nation.

Interested?

The people on all sides of this argument have an **interest** in the outcome of the debate. That just means they are interested or concerned with how things end up. People pay attention to things that will likely affect their lives.

How might limiting starchy vegetables like potatoes affect...

Comprehensive Inorganic Chemistry II Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on with a different viewpoint and format from our 1973 work, Comprehensive Inorganic Chemistry, edited by Bailar, Emel'us, Nyholm, and Trotman-Dickenson, which has received over 2 000 citations. The new work will also complement other recent Elsevier works in this area, Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in Chief. The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources and the original work, but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields such as biological inorganic chemistry, materials chemistry, solid state chemistry, and nanoscience. Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarises recent developments and simultaneously provide background information. Forms the new definitive source for researchers interested in elements and their applications, completely replacing the highly cited first edition which published in 1973.

Vadose Zone Processes John S. Selker, James T. McCord, C. Kent Keller, 1999-06-28 Vadose Zone Processes provides a unified up to date treatment on the movement of water through unsaturated media. In addition to covering the basic equations governing the flow and fate of water in unsaturated media, the text covers the biogeochemistry of vadose environments and the statistical description of vadose processes. The authors emphasize maintaining an intuitive understanding of how the results are derived and how they are appropriately applied. This comprehensive and important book will be useful not only to those in traditional fields such as civil engineering, geology, crop science, chemical engineering, agricultural engineering, and hydrology, but also in the newer environmental engineering fields including containment, transport, pollution, remediation, and waste disposal.

Testing and Assessment in Counseling

Practice C. Edward Watkins, Jr., Vicki L. Campbell, 2012-12-06 The primary purpose of this revision remains identical to that of the first edition to show how key personality cognitive behavioral and vocational tests assessment procedures can be used by counselors in their work with clients Too often assessment books only provide the reader with information about tests and assessment procedures They do not however take the next step showing readers how these tests assessment procedures can be used and integrated into the actual work of counseling This revision is designed to fill that void Chapter authors all of whom are experts in their respective topic areas share the theoretical and research backgrounds about a particular test assessment procedure and then provide a case example or examples to show how assessment data can be meaningfully incorporated into the counseling process
