Topographic Laser Ranging and Scanning Jie Shan,Charles K. Toth,2017-12-19 A systematic in depth introduction to theories and principles of Light Detection and Ranging LiDAR technology is long overdue as it is the most important geospatial data acquisition technology to be introduced in recent years An advanced discussion this text fills the void Professionals in fields ranging from geology geography and geoinformatics to physics transportation and law enforcement will benefit from this comprehensive discussion of topographic LiDAR principles systems data acquisition and data processing techniques The book covers ranging and scanning fundamentals and broad contemporary analysis of airborne LiDAR systems as well as those situated on land and in space The authors present data collection at the signal level in terms of waveforms and their properties at the system level with regard to calibration and georeferencing and at the data level to discuss error budget quality control and data organization They devote the bulk of the book to LiDAR data processing and information extraction and elaborate on recent developments in building extraction and reconstruction highlighting quality and performance evaluations There is also

extensive discussion of the state of the art technological developments used in filtering algorithms for digital terrain model generation strip adjustment of data for registration co registration of LiDAR data with imagery forestry inventory and surveying Readers get insight into why LiDAR is the effective tool of choice to collect massive volumes of explicit 3 D data with unprecedented accuracy and simplicity Compiled by leading experts talking about much of their own pioneering work this book will give researchers professionals and senior students novel ideas to supplement their own experience and practices

Advanced Model Predictive Control for Autonomous Marine Vehicles Yang Shi,Chao Shen,Henglai Wei,Kunwu Zhang,2023-02-13 This book provides a comprehensive overview of marine control system design related to underwater robotics applications In particular it presents novel optimization based model predictive control strategies to solve control problems appearing in autonomous underwater vehicle applications These novel approaches bring unique features such as constraint handling prioritization between multiple design objectives optimal control performance and robustness against disturbances and uncertainties into the control system design They therefore form a more general framework to design marine control systems and can be widely applied Advanced Model Predictive Control for Autonomous Marine Vehicles balances theoretical rigor providing thorough analysis and developing provably correct design conditions and application perspectives addressing practical system constraints and implementation issues Starting with a fixed point positioning problem for a single vehicle and progressing to the trajectory tracking and path following problem of the vehicle and then to the coordination control of a large scale multi robot team this book addresses the motion control problems increasing their level of challenge step by step At each step related subproblems such as path planning thrust allocation collision avoidance and time constraints for real time implementation are also discussed with solutions In each chapter of this book compact and illustrative examples are provided to demonstrate the design and implementation procedures As a result this book is useful for both theoretical study and practical engineering design and the tools provided in the book are readily applicable for real world implementation
