The Reproductive System The Open The Open Courses Library, 2019-10-25 The Reproductive System Biology Small uncoordinated and slick with amniotic

fluid a newborn encounters the world outside of her mother's womb. We do not often consider that a child's birth is proof of the healthy functioning of both her mother's and father's reproductive systems. Moreover, her parents' endocrine systems had to secrete the appropriate regulating hormones to induce the production and release of unique male and female gametes (reproductive cells containing the parents' genetic material, one set of 23 chromosomes). Her parents' reproductive behavior had to facilitate the transfer of male gametes (the sperm) to the female reproductive tract at just the right time to encounter the female gamete (an oocyte/egg). Finally, combination of the gametes (fertilization) had to occur, followed by implantation and development. In this book, you will explore the male and female reproductive systems whose healthy functioning can culminate in the powerful sound of a newborn's first cry.

Chapter Outline: Anatomy and Physiology of the Male Reproductive System; Anatomy and Physiology of the Female Reproductive System; Development of the Male and Female Reproductive Systems.

Covers the mechanisms controlling reproductive function in the female. Offers a cellular and molecular approach to the control of reproductive function. Focuses on the ovary and uterus and includes a discussion of the early embryo, including hormonal control of folliculogenesis and luteal function. Cell-cell interactions in the follicle. Role of cytokines in regulating steroid and protein hormone production. Endocrine receptors and mechanisms in ovulation. Cell biology of the oviduct and uterus. Migratory cells. Paracrine regulation. Hormones of the trophoblast and early placenta. Interaction between trophoblast and endometrium. Provides extensive references.
