Kelly, Alan R. Orr, 1980 Frontiers of Optical Spectroscopy Baldassare Di Bartolo, Ottavio Forte, 2005-02-17 Advanced spectroscopic techniques allow the probing of very small systems and very fast phenomena conditions that can be considered extreme at the present status of our experimentation and knowledge Quantum dots nanocrystals and single molecules are examples of the former and events on the femtosecond scale examples of the latter The purpose of this book is to examine the realm of phenomena of such extreme type and the techniques that permit their investigations Each author has developed a coherent section of the program starting at a somewhat fundamental level and ultimately reaching the frontier of knowledge in the field in a systematic and didactic fashion The formal lectures are complemented by additional seminars **The Certification Step** Carol J. Coulomb Interactions in Nuclear and Atomic Few-Body Collisions Frank S. Levin, David A. Micha, 2013-11-21 This series Finite Systems and Multiparticle Dynamics is intended to provide timely reviews of current research topics written in a style sufficiently pedagogic so as to allow a nonexpert to grasp the underlying ideas as well as understand technical details The series is an outgrowth of our involvement with three interdisciplinary activities namely those arising from the American Physical Society's Topical Group on Few Body Systems and Multiparticle Dynamics the series of Gordon Research Conferences first known by the title Few Body Problems in Chemistry and Physics and later renamed Dynamics of Simple Systems in Chemistry and Physics and the series of Sanibel Symposia sponsored in part by the University of Florida The vitality of these activities and the enthusiastic response to them by researchers in various subfields of physics and chemistry have convinced us that there is a place even a need for a series of timely reviews on topics of interest not only to a narrow band of experts but also to a broader interdisciplinary readership It is our hope that the emphasis on pedagogy will permit at least some of the books in the series to be useful in graduate level courses Rather than use the adjective Few Body or Simple to modify the word Systems in the title we have chosen Finite It better expresses the wide range of systems with which the reviews of the series may deal

Two-Dimensional Quantum Gases Cheng-An Chen, 2022-10-11 This thesis explores the physics of non equilibrium quantum dynamics in homogeneous two dimensional 2D quantum gases Ultracold quantum gases driven out of equilibrium have been prominent platforms for studying quantum many body physics However probing non equilibrium dynamics in conventionally trapped inhomogeneous atomic quantum gases has been a challenging task because coexisting mass transport and spreading of quantum correlations often complicate experimental analyses In this work the author solves this technical hurdle by producing ultracold cesium atoms in a quasi 2D optical box potential The exquisite optical trap allows one to remove density inhomogeneity in a degenerate quantum gas and control its dimensionality The author also details the development of a high resolution in situ imaging technique to monitor the evolution of collective excitations and quantum transport down to atomic shot noise and at the length scale of elementary collective excitations Meanwhile tunable Feshbach resonances in ultracold cesium atoms permit precise and dynamical control of interactions with high temporal and even spatial resolutions By employing these state of the art techniques the author performed interaction quenches to control the generation and evolution of quasiparticles in quantum gases presenting the first direct measurement of quantum entanglement between interaction quench generated quasiparticle pairs in an atomic superfluid Quenching to attractive interactions this work shows stimulated emission of quasiparticles leading to amplified density waves and fragmentation forming 2D matter wave Townes solitons that were previously considered impossible to form in equilibrium due to their instability This thesis unveils a set of scale invariant and universal quench dynamics and provides unprecedented tools to explore quantum entanglement transport in a homogenous quantum gas *Challenging Units for Gifted Learners* Kenneth J.
