A First Course in the Sporadic SICs Blake C. Stacey, 2021-05-31 This book focuses on the Symmetric Informationally Complete quantum measurements SICs in dimensions 2 and 3 along with one set of SICs in dimension 8 These objects stand out in ways that have earned them the moniker of sporadic SICs By some standards they are more approachable than the other known SICs while by others they are simply atypical The author forays into quantum information theory using them as examples and the author explores their connections with other exceptional objects like the Leech lattice and integral octonions The sporadic SICs take readers from the classification of finite simple groups to Bell's theorem and the discovery that hidden variables cannot explain away quantum uncertainty While no one department teaches every subject to which the sporadic SICs pertain the topic is approachable without too much background knowledge The book includes exercises suitable for an elective at the graduate or advanced undergraduate level **Homotopy in Exact Categories** Jack

Kelly, 2024-07-25 View the abstract *Computational Algebra: Course And Exercises With Solutions* Ihnen Yengui, 2021-05-17 This book intends to provide material for a graduate course on computational commutative algebra and algebraic geometry highlighting potential applications in cryptography Also the topics in this book could form the basis of a graduate course that acts as a segue between an introductory algebra course and the more technical topics of commutative algebra and algebraic geometry This book contains a total of 124 exercises with detailed solutions as well as an important number of examples that illustrate definitions theorems and methods This is very important for students or researchers who are not familiar with the topics discussed Experience has shown that beginners who want to take their first steps in algebraic geometry are usually discouraged by the difficulty of the proposed exercises and the absence of detailed answers Therefore exercises and their solutions as well as examples occupy a prominent place in this course This book is not designed as a comprehensive reference work but rather as a selective textbook The many exercises with detailed answers make it suitable for use in both a math or computer science course **A First Course in Category Theory** Ana Agore, 2023-12-12 This

textbook provides a first introduction to category theory a powerful framework and tool for understanding mathematical structures Designed for students with no previous knowledge of the subject this book offers a gentle approach to mastering its fundamental principles Unlike traditional category theory books which can often be overwhelming for beginners this book has been carefully crafted to offer a clear and concise introduction to the subject It covers all the essential topics including categories functors natural transformations duality equivalence co limits and adjunctions Abundant fully worked examples guide readers in understanding the core concepts while complete proofs and instructive exercises reinforce comprehension and promote self study The author also provides background material and references making the book suitable for those with a basic understanding of groups rings modules topological spaces and set theory Based on the author's course at the Vrije Universiteit Brussel the book is perfectly suited for classroom use in a first introductory course in category theory Its clear

and concise style coupled with its detailed coverage of key concepts makes it equally suited for self study

Translating Euclid Gerry Stahl, 2022-05-31 Translating Euclid reports on an effort to transform geometry for students from a stylus and clay tablet corpus of historical theorems to a stimulating computer supported collaborative learning inquiry experience The origin of geometry was a turning point in the pre history of informatics literacy and rational thought Yet this triumph of human intellect became ossified through historic layers of systematization beginning with Euclid s organization of the Elements of geometry Often taught by memorization of procedures theorems and proofs geometry in schooling rarely conveys its underlying intellectual excitement The recent development of dynamic geometry software offers an opportunity to translate the study of geometry into a contemporary vernacular However this involves transformations along multiple dimensions of the conceptual and practical context of learning Translating Euclid steps through the multiple challenges involved in redesigning geometry education to take advantage of computer support Networked computers portend an interactive approach to exploring dynamic geometry as well as broadened prospects for collaboration The proposed conception of geometry emphasizes the central role of the construction of dependencies as a design activity integrating human creation and mathematical discovery to form a human centered approach to mathematics This book chronicles an iterative effort to adapt technology theory pedagogy and practice to support this vision of collaborative dynamic geometry and to evolve the approach through on going cycles of trial with students and refinement of resources It thereby provides a case study of a design based research effort in computer supported collaborative learning from a human centered informatics perspective

Topological Modular Forms Christopher L. Douglas, John Francis, André G. Henriques, Michael A. Hill, 2014-12-04 The theory of topological modular forms is an intricate blend of classical algebraic modular forms and stable homotopy groups of spheres The construction of this theory combines an algebro geometric perspective on elliptic curves over finite fields with techniques from algebraic topology particularly stable homotopy theory It has applications to and connections with manifold topology number theory and string theory This book provides a careful accessible introduction to topological modular forms After a brief history and an extended overview of the subject the book proper commences with an exposition of classical aspects of elliptic cohomology including background material on elliptic curves and modular forms a description of the moduli stack of elliptic curves an explanation of the exact functor theorem for constructing cohomology theories and an exploration of sheaves in stable homotopy theory There follows a treatment of more specialized topics including localization of spectra the deformation theory of formal groups and Goerss Hopkins obstruction theory for multiplicative structures on spectra The book then proceeds to more advanced material including discussions of the string orientation the sheaf of spectra on the moduli stack of elliptic curves the homotopy of topological modular forms and an extensive account of the construction of the spectrum of topological modular forms The book concludes with the three original pioneering and enormously influential manuscripts on the subject by Hopkins Miller and Mahowald
