## **Aashto Darwin Manual:**

*The Handbook of Highway Engineering* T.F. Fwa, 2005-09-28 Modern highway engineering reflects an integrated view of a road system's entire lifecycle including any potential environmental impacts and seeks to develop a sustainable infrastructure through careful planning and active management. This trend is not limited to developed nations but is recognized across the globe. Edited by renowned authority *Concrete Pavement Design Manual*, 1992 Calibration of Rutting Models for Structural and Mix Design Harold L. Von Quintus, 2012 TRB's National Cooperative Highway Research Program NCHRP Report 719 Calibration of Rutting Models for Structural and Mix Design highlights proposed revisions to the Mechanistic Empirical Pavement Design Guide MEPDG and software to incorporate three alternative rut depth prediction models that rely on repeated load triaxial permanent deformation or constant height testing to provide the requisite input data. **Pavement Design Manual** Colorado. Department of Transportation, 2011 The purpose of the Manual is to provide the Colorado Department of Transportation CDOT and consultant pavement designers with a uniform and detailed procedure for designing pavements on CDOT projects. *Flexible Pavement Design Manual* Florida. Dept. of Transportation. Pavement Management Office, 2002 *Implementation of the Mechanistic-empirical Pavement Design Guide in Utah* Michael I. Darter, Leslie Titus-Glover, Harold L. Von Quintus, 2009 Highway agencies across the nation are moving towards implementation of the new AASHTO Mechanistic Empirical Pavement Design Guide MEPDG for pavement design. The objective of this project was to implement the MEPDG into the daily operations of the Utah Department of Transportation UDOT. The implementation of the MEPDG as a UDOT standard required modifications in some UDOT pavement design protocols i.e. lab testing procedures, equipment and protocols, traffic data reporting, software issues, design output interpretation and others. A key requirement is validation of the MEPDG's nationally calibrated pavement distress and smoothness prediction models when applied under Utah conditions and performing local calibration if needed. This was accomplished using data from Long Term Pavement Performance LTPP projects located in Utah and UDOT pavement management system PMS pavement sections. The nationally calibrated MEPDG models were evaluated. With the exception of the new hot mix asphalt HMA pavement total rutting model, all other models were found to be reasonable. The rutting model was locally calibrated to increase goodness of fit and remove significant bias. Due to the nature of the data used in model validation, it is recommended that further MEPDG model validation be accomplished in the future using a database that contains HMA pavement and jointed plain concrete pavement JPCP exhibiting moderate to severe deterioration. This report represents Phase II of the UDOT MEPDG implementation study and builds on the Phase I study report completed in 2005 for UDOT. The Draft User's Guide for UDOT Mechanistic Empirical Pavement Design UDOT Research Report No. UT 09 11a dated October 2009 incorporates the findings of this report as inputs and pavement design guidelines for Utah for use by UDOT's pavement design engineers during trial implementation of the MEPDG.
