2. During photosynthesis, plants use _____ from the sun to convert _____ from the air and _____ from the soil into the high-energy food molecule _____.
3. Carbon dioxide enters the plant through pores found on the bottom of _____. Water enters the plant through the _____, an organ system that is found underground. Both of these organs are spread out and feathery, which maximizes their _____ for absorption.
4. If you zoom into a plant tissue under the microscope, you can tell that it is made of _____ cells because they all have special organelles, a nucleus to store DNA, and the tissue is multicellular. You would also see that water is stored in the _____ of each cell. This supplies water for photosynthesis but also helps to hold plants up against _____.
