Hatfield, Hermann Lotze-Campen, Anthony E. Hall, 2011-10-25 A major task of our time is to ensure adequate food supplies for the world's current population now nearing 7 billion in a sustainable way while protecting the vital functions and biological diversity of the global environment The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming and as the population continues to grow Current projections suggest that the world's temperatures will rise 1.8-4.0 by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid century after which it may stabilize This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems particularly in regard to genetics to the changing conditions Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions The first two sections provide a foundation on the factors involved in climate stress assessing current climate change by region and covering crop physiological responses to these changes The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change Written by an international team of authors Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply and is an essential resource for academics researchers and professionals in the fields of crop science agronomy plant physiology and molecular biology crop consultants and breeders as well as climate and food scientists **Conservation Biology in Sub-Saharan Africa** Richard

21st-Century Statecraft Nayef Al-Rodhan, 2022-07-28. From civilisational frontier risks associated with new challenges like disruptive technologies to the shifting nature of great power conflicts and subversion, the 21st century requires a new approach to statecraft. In *21st Century Statecraft*, Professor Nayef Al Rodhan proposes five innovative statecraft concepts. He makes the case for a new method of geopolitical analysis called meta geopolitics and for dignity based governance. He shows how in an interdependent and interconnected world, traditional thinking must move beyond zero sum games and focus on multi sum and symbiotic realist interstate relations. This requires a new paradigm of global security premised on five dimensions of security and a new concept of power just power which highlights the centrality of justice to state interests. These concepts enable states to balance competing interests and work towards what the author calls reconciliation statecraft. Throughout, Professor Al Rodhan brings his philosophical and neuroscientific expertise to bear, providing a practical model for conducting statecraft in a sustainable way.
