English Mechanic and Mirror of Science ,1866 **SYNER-G: Typology Definition and Fragility Functions for Physical Elements at Seismic Risk** K. Pitilakis,H. Crowley,A.M. Kaynia,2014-01-20 Fragility functions constitute an emerging tool for the probabilistic seismic risk assessment of buildings infrastructures and lifeline systems The work presented in this book is a partial product of a European Union funded research project SYNER G FP7 Theme 6 Environment where existing knowledge has been reviewed in order to extract the most appropriate fragility functions for the vulnerability analysis and loss estimation of the majority of structures and civil works exposed to earthquake hazard Results of other relevant European projects and international initiatives are also incorporated in the book In several cases new fragility and vulnerability functions have been developed in order to better represent the specific characteristics of European elements at

risk Several European and non European institutes and Universities collaborated efficiently to capitalize upon existing knowledge State of the art methods are described existing fragility curves are reviewed and where necessary new ones are proposed for buildings lifelines transportation infrastructures as well as for utilities and critical facilities Taxonomy and typology definitions are synthesized and the treatment of related uncertainties is discussed A fragility function manager tool and fragility functions in electronic form are provided on extras springer com Audience The book aims to be a standard reference on the fragility functions to be used for the seismic vulnerability and probabilistic risk assessment of the most important elements at risk It is of particular interest to earthquake engineers scientists and researchers working in the field of earthquake risk assessment as well as the insurance industry civil protection and emergency management agencies
