

## Blood Types

### What's New?

Blood is the fluid that flows throughout your body carrying oxygen and nutrients.

### What are blood types?

Everyone's blood has some the same in the red part. But there are different types of blood. Specifically, there are two different types of blood. They are:

- Type A
- Type B
- Type AB
- Type O

### Interesting Fact

The most common blood type in the US is O. The least common blood type in the US is AB.

### How do doctors tell the difference between blood types?

Doctors tell all the difference between blood types by looking at things called markers on blood cells. The markers are called antigens. Type A blood has Type A antigens. Type B blood has Type B antigens. Type AB blood has both Type A and B antigens, and Type O blood does not have any antigens.

### What determines your blood type?

You inherit your blood type from your parents. When you are conceived, each one of your parents gives you an allele that produces your blood type. If your mom gives you an allele for Type A blood and your dad gives you an allele for Type B blood, then you will have Type AB blood because Type B means you have the antigens. If your mom gives you an allele for Type B blood and your dad gives you an allele for Type A blood, then you will have Type AB blood. Finally, if your mom gives you Type A and your dad gives you Type A, you will be Type A. This works the same if your parents give you Type B or you

### Why is knowing your blood type important?

It is important to know your blood type because not all blood types can be combined (are compatible). If someone receives a transfusion of an incompatible blood type they may have a bad reaction, and in some cases may even die.

### What blood types are compatible with each other?

You can only receive blood that is the same type as your own. If you are Type AB, you can receive either A, B or A blood. That's why we receive all types. Type AB people are called the universal recipient. If you are Type B, you can only get Type B blood but you can donate to anyone other than your own or anything to Type AB. Since Type O's can donate all types, they are called the universal donor.

### The Rhese (R) Factor

You might be thinking that you're smart people not only say the letter given to their blood type but whether they were positive or negative, as in, "I'm AB<sup>+</sup>". That positive or negative comes from the Rhese factor that was first seen in the Rhese monkeys. It is an inherited protein like the antigens. If you have the protein on your blood cells, you are Rh<sup>+</sup> (A<sup>+</sup>, B<sup>+</sup>, O<sup>+</sup>, etc.). If you don't have it, you are Rh<sup>-</sup> (A<sup>-</sup>, B<sup>-</sup>, O<sup>-</sup>). You can only receive blood from someone who is the same as you (A<sup>+</sup> or A<sup>-</sup>). The letter designates effects on having the wrong type and what if you get the wrong Rh factor.

### Why is knowing blood important?

Knowing blood is important because every day there are many people who need blood transfusions to survive. Typically we lack the capability to make blood at all, so not only do we as people who are willing to give blood to help those in need.
