Occupational Health Services Tee L. Guidotti, 2013 Workers and their families, employers and society as a whole benefit when providers deliver the best quality of care to injured workers and when they know how to provide effective services for both prevention and fitness for duty and understand why instead of just following regulations. Designed for professionals who deliver, manage and hold oversight responsibility for occupational health in an organization or in the community, Occupational Health Services guides the busy practitioner and clinic manager in setting up, running and improving healthcare services for the prevention, diagnosis, treatment and occupational management of work related health issues. The text covers an overview of occupational health care in the US and Canada, how it is organized, who pays for what, how it is regulated and how workers compensation works, how occupational health services are managed in practice, whether within a company as a global network, in a hospital or medical group practice as a free standing clinic or following other models, management of core services including recordkeeping, marketing, service delivery options, staff recruitment and evaluation and program evaluation, depth and detail on specific services including clinical service delivery for injured workers, periodic health surveillance, impairment assessment, fitness for duty, alcohol and drug testing, employee assistance, mental health, health promotion, emergency management, global health management and medico legal services. This highly focused and relevant combined handbook and textbook is aimed at improving the provision of care and health protection for workers and will be of use to both managers and health practitioners from a range of backgrounds including but not limited to medicine, nursing, health services administration and physical therapy.

Carey, 2012-06-28 *Stroke Rehabilitation: Insights from Neuroscience and Imaging* informs and challenges neurologists, rehabilitation therapists, imagers, and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures. The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior and learning. Similarly, improved knowledge of how the brain processes information after injury and recovers over time is providing new perspectives on what can be achieved through rehabilitation. *Stroke Rehabilitation* explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective. Active skill-based learning is identified as a central element of a restorative approach to rehabilitation. The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement, sensation, cognition, and language are also discussed. Current interventions are evaluated relative to this knowledge base, and examples are given of how active learning principles have been successfully applied in specific interventions. The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation. The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach. Focusing on new insights from neuroscience and imaging, the book explores the potential to tailor interventions to the individual based on viable brain networks.
