From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E.

Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from leading researchers in the field the e book covers a wide range of subjects arranged by six sections The standard picture Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors this comprehensive treatment includes theoretical analyses meta theoretical critiques commentaries and a range of empirical reports The contents of the Research Topic should appeal to psychologists linguists philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning judgment and decision making and moral judgment to epistemology and theory of mind philosophical logic and meta ethics *Bringing the Common Core Math Standards to Life* Yvelyne

**Dystopia & Education** Jessica A. Heybach, Eric C. Sheffield, 2013-04-01 Dystopia and Education Insights into Theory Praxis and Policy in an age of Utopia Gone Wrong provides an as of yet unexplored critical perspective for examining contemporary educational theory praxis and policy with particular reference to the current state of dehumanizing and often oppressive policy and practices that have come to demarcate the era of NCLB and RTT The authors in this collection employ dystopian themes found in literature film visual art and video games as the lens for that critical inquiry As such Dystopia and Education Insights into Theory Praxis and Policy is an essential contribution to the philosophical critical tradition in educational scholarship It is especially valuable because the inquiry undertaken is from a new perspective one that will extend the critical tradition into a yet unexplored arena Given the educational climate established by NCLB and RTT this collection is especially important to the ongoing critical analysis of such policy mandates There is also a significantly important timeliness to this book given NCLB s utopian expectation of universal academic

proficiency among American schoolchildren by the year 2014 as educators race to achieve such a noble yet naive goal this collection of essays examines the educational environment that has been enacted to achieve such ends and describes our current state as a utopia gone wrong      *Computational Business Analytics* Subrata Das,2013-12-14 This book presents tools and techniques for descriptive predictive and prescriptive analytics applicable across multiple domains The author first covers core descriptive and inferential statistics for analytics and then enhances numerical statistical techniques with symbolic artificial intelligence and machine learning techniques for richer predictive and prescriptive analytics Through many examples and challenging case studies from a variety of fields practitioners easily see the connections to their own problems and can then formulate their own solution strategies      **Cognitive Movement Ecology** Eliezer Gurarie,Tal Avgar,2024-02-09 At least since Darwin argued that the difference in cognitive abilities between animals and humans is one of degree and not of kind the study of animal cognition has been an active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems      George W. Bush, Former President of the United States (Leadership, Vision, Reforms) IBP USA,2013-08 A collaboration between an attorney and an animal protection advocate this work utilizes the extremely controversial and high profile crush video case US v Stevens to explore how American society attempts to balance the protection of free speech and the prevention of animal cruelty Starting from the detailed case study of a single prominent ruling the authors provide a masterful survey of important issues facing society in the area of animal welfare The Stevens case included various hot topic elements connected to the role of government as arbiter of public morality including judicial attitudes to sexual deviance and dogfighting Because it is one of only two animal rights cases that the US Supreme Court has handled and the only case discussing the competing interests of free speech and animal cruelty it will be an important topic for discussion in constitutional and animal law courses for decades to come The Stevens case arose from the first conviction under 18 USC 48 Section 48 a federal law enacted in 1999 which criminalized the creation sale and or possession of certain depictions of animal cruelty The US Congress intended Section 48 to end the creation and interstate trafficking of depictions of animal cruelty in which animals are abused or even killed for entertainment s sake Proponents of Section 48 predicted that countless benefits to both humans and animals would

flow from its enforcement Opponents of the law argued that it was too far reaching and would stifle protected speech Critics of Section 48 appeared to have prevailed when the US Supreme Court struck the law down as unconstitutionally overbroad Although a law tailored to address the Supreme Court's concerns was quickly enacted the free speech animal cruelty controversy is far from over

**Particle Filters for Random Set Models** Branko Ristic, 2013-04-15 This book discusses state estimation of stochastic dynamic systems from noisy measurements specifically sequential Bayesian estimation and nonlinear or stochastic filtering The class of solutions presented in this book is based on the Monte Carlo statistical method Although the resulting algorithms known as particle filters have been around for more than a decade the recent theoretical developments of sequential Bayesian estimation in the framework of random set theory have provided new opportunities which are not widely known and are covered in this book This book is ideal for graduate students researchers scientists and engineers interested in Bayesian estimation

*Educational Neuroscience, Constructivist Learning, and the Mediation of Learning and Creativity in the 21st Century* Layne Kalbfleisch, 2015-05-28 The advent of educational neuroscience a transdisciplinary exercise emerging from cognitive neuroscience and educational psychology is the examination of physiological processes that undermine support and enhance the capacities to learn and create The physiological underpinnings of learning and creativity each impact human ability and performance and mediate the processes of becoming educated expert and valued Evidence of learning provides support to an ongoing canon process system field or domain while evidence of creativity results in an elaboration or departure from an ongoing canon process system field or domain Educational neuroscience extends a challenge to scholars from multiple contexts to engage in the characterization and exploration of human ability and performance in these realms The role of context both environmental and interoceptive is an integral part of efforts in educational neuroscience and in theories of constructivist learning to contribute ecologically valid insight to the pragmatic processes of learning and creativity Examination at this level of specificity is vital to our ability to educate and support human potential in the 21st century This Research Topic examines the neural basis of cognitive states and processes that influence knowledge and skill acquisition tied to the demonstration of human ability and performance across individual differences and in multiple contexts including STEM learning and the arts
