

Steerable Axle Calibration

General Information

The steerable axle is controlled by a steering actuator that automatically shifts steering control from front steering to frame articulation, and from frame articulation to rear steering when the vehicle is not steering more than 10 degrees. The actuator also controls the articulation "indicator" lamp and steers articulation center is obtained and maintained.

The frame actuator steers from left to right articulation center. All wheel steering is done. Proper entry of these points will result in the correct operation of the steerable axle.

Frame center: There is an equal amount of steer in both directions and the frame keeps articulation returning dead center when turning out of articulation turn when in the combination steering mode.

If the front potentiometer is out of center, it will cause the vehicle to steer left and steer right in one direction. However, it will be in the opposite direction.

To check the center measure from dead center cylinder to the potentiometer from the cylinder to the potentiometer in both directions. If the front wheel is equal to 1.44 in (3.66 cm) both directions, there can be no need to make front pot adjustment.

If the front axle steering is not steering a full 40° of steering turn, check and adjust the pot. Use the following procedure:

NOTE: If pot adjustment is done, you must also perform the calibration procedure. If you require more adjustment is not required, there will be no need to perform the calibration procedure.

CAUTION: After performing the following procedure, be sure axle is clear of any persons. Always always look to persons for left or right turn.

Centering Potentiometers

To adjust the potentiometers for zero a 100Ω resistor is measured the normal resistance between wires No. 32 and 14. Resistance value should be 100Ω. If not, then, then, connect the other end leads to wire No. 32 and the other end, turn the pot through its full working range and zero out the potentiometer range is set.

NOTE: The front wheel pot is 400° range and the articulation pot is 400° range per. The maximum of range is 10000Ω or 20° resistance the rest is the full working range of the pot.

Steerable Axle Calibration

Place a vertical scale of the vehicle steering and make the pot in the midpoint. Steer the vehicle left and right (No. 32) until the No. 14 wire and make the difference and both readings are the same within ± 40 ohms of each other.

The difference in resistance should be 400Ω or less. The accuracy must pot is set.

Pre-Calibration Procedure

1. Front steering potentiometer adjustment

- Start engine and move the front steering axle into 40° degree wheel position as indicated by the scale to frame center.

NOTE: To be sure the steerable axle center is positioned correctly and the pot is in dead center, wheel at 40° and through the steering range in the frame position in the right side of the turn scale. Adjust the pot center. If necessary to this position.

CAUTION: Remove the foot board safety after adjustments have been made.

- Adjust front wheel potentiometer adjustment dead left (No. 32) to 300Ω and 300Ω is zero between center top of the pot and scale.

Figure 1. Front Wheel Steer Potometer

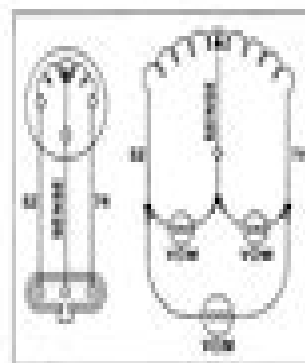

Figure 2

10000Ω
No. 32 to center = 300
No. 14 to center = 300
Total 1000 ohms
No. 32 to 14 = 1000 ohms
Difference = 100 ohms
