*Sexual Segregation in Vertebrates* Kathreen Ruckstuhl, Peter Neuhaus, 2006-01-05 Males and females often differ in developmental patterns adult morphology ecology and behaviour and in many mammals males are often larger Size dimorphism results in divergent nutritional and energetic requirements or reproductive strategies by the sexes which in turn sometimes causes them to select different forage use different habitats and express differing social affinities Such divergent life styles often lead males and females to live large parts of their lives separately Sexual segregation is widespread in animals Males and females may share the same habitat but at different times for example or they might use different habitats entirely Why did sexual segregation evolve and what factors contribute to it *Sexual Segregation in Vertebrates* explores these questions by looking at a wide range of vertebrates and is aimed as a synthesis of our current understanding and a guide for future research

**Tracks and Shadows** Harry W. Greene, 2016-08-16 Intellectually rich intensely personal and beautifully written Tracks and Shadows is both an absorbing autobiography of a celebrated field biologist and a celebration of beauty in nature Harry W. Greene award winning author of Snakes The Evolution of Mystery in Nature delves into the poetry of field biology showing how nature eases our existential quandaries More than a memoir the book is about the wonder of snakes the beauty of studying and understanding natural history and the importance of sharing the love of nature with humanity Greene begins with his youthful curiosity about the natural world and moves to his stints as a mortician's assistant ambulance driver and army medic In detailing his academic career he describes how his work led him to believe that nature's most profound lessons lurk in hard won details He discusses the nuts and bolts of field research and teaching contrasts the emotional impact of hot dry habitats with hot wet ones imparts the basics of snake biology and introduces the great explorers Charles Darwin and Alfred Russel Wallace He reflects on friendship and happiness tackles notions like anthropomorphism and wilderness and argues that organisms remain the core of biology science plays key roles in conservation and natural history offers an enlightened form of contentment **The Ecology and Behavior of Amphibians** Kentwood D. Wells, 2010-02-15 Consisting of more than six thousand species amphibians are more diverse than mammals and are found on every continent save Antarctica Despite the abundance and diversity of these animals many aspects of the biology of amphibians remain unstudied or misunderstood The Ecology and Behavior of Amphibians aims to fill this gap in the literature on this remarkable taxon It is a celebration of the diversity of amphibian life and the ecological and behavioral adaptations that have made it a successful component of terrestrial and aquatic ecosystems Synthesizing seventy years of research on amphibian biology Kentwood D. Wells addresses all major areas of inquiry including phylogeny classification and morphology aspects of physiological ecology such as water and temperature relations respiration metabolism and energetics movements and orientation communication and social behavior reproduction and parental care ecology and behavior of amphibian larvae and ecological aspects of metamorphosis ecological impact of predation on amphibian populations and antipredator defenses and aspects of amphibian community ecology With an eye towards modern concerns The Ecology and Behavior of Amphibians concludes with a chapter devoted to amphibian conservation An unprecedented scholarly contribution to amphibian biology this book is eagerly anticipated among specialists **Snakes** Stephen J. Mullin, Richard A. Seigel, 2011-08-15 Destruction of habitat due to urban sprawl pollution and deforestation has caused population declines or even extinction of many of the world's approximately 2 600 snake species Furthermore misconceptions about snakes have made them among the most persecuted of all animals

despite the fact that less than a quarter of all species are venomous and most species are beneficial because they control rodent pests It has become increasingly urgent therefore to develop viable conservation strategies for snakes and to investigate their importance as monitors of ecosystem health and indicators of habitat sustainability In the first book on snakes written with a focus on conservation editors Stephen J Mullin and Richard A Seigel bring together leading herpetologists to review and synthesize the ecology conservation and management of snakes worldwide These experts report on advances in current research and summarize the primary literature presenting the most important concepts and techniques in snake ecology and conservation The common thread of conservation unites the twelve chapters each of which addresses a major subdiscipline within snake ecology Applied topics such as methods and modeling and strategies such as captive rearing and translocation are also covered Each chapter provides an essential framework and indicates specific directions for future research making this a critical reference for anyone interested in vertebrate conservation generally or for anyone implementing conservation and management policies concerning snake populations Contributors Omar Attum Indiana University Southeast Steven J Beaupre University of Arkansas Xavier Bonnet Centre National de la Recherche Scientifique Frank T Burbrink College of Staten Island The City University of New York Gordon M Burghardt University of Tennessee Todd A Castoe University of Colorado David Chiszar University of Colorado Michael E Dorcas Davidson College Lara E Douglas University of Arkansas Christopher L Jenkins Project Orianne Ltd Glenn Johnson State University of New York at Potsdam Michael Hutchins The Wildlife Society Richard B King Northern Illinois University Bruce A Kingsbury Indiana University Purdue University Fort Wayne Thomas Madsen University of Wollongong Stephen J Mullin Eastern Illinois University James B Murphy National Zoological Park Charles R Peterson Idaho State University Kent A Prior Parks Canada Richard A Seigel Towson University Richard Shine University of Sydney Kevin T Shoemaker College of Environmental Science and Forestry State University of New York Patrick J Weatherhead University of Illinois John D Willson University of Georgia
