Inventing the Mathematician Sara N. Hottinger, 2016-03-01 Where and how do we as a culture get our ideas about mathematics and about who can engage with mathematical knowledge Sara N Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics mathematics textbooks the history of mathematics portraits of mathematicians and the field of ethnomathematics Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups including women and people of color are able to see themselves as practitioners of math Inventing the Mathematician provides a blueprint for how to engage in a deconstructive project revealing the limited and problematic nature of the normative construction of mathematical

History Below the Global Lorenzo Kamel,2024-04-02 History Below the Global aims to foster an entangled knowledge of global history and to place others at the centre stage to better understand the fluid world which we inhabit Relying on primary sources in seven languages and books written by hundreds of African Asian Middle Eastern and South American scholars Lorenzo Kamel examines the coloniality of power in historical research and sheds light on the largely neglected roles of the others and their modernities in history The book provides three elements combined Firstly a thorough analysis of the process of accumulation knowledge piece by piece which underpins some of the major achievements in human history Secondly a view on pre colonial perspectives and the process through which the latter have been swallowed up by Eurocentric and solipsistic perceptions Lastly a study of the roots and outcomes of colonialisms and their echoes in our present These three elements are addressed by combining multiple methodologies and approaches in the awareness that the history analysed as well as the historiographical trajectories that underlie it are ultimately inter penetrable as well as

themselves the result of a process of accumulation History Below the Global challenges the view that first and foremost the West for bad and for good is and was the centre the proactive actor which did and undid This volume will be of value to all those interested in global history the history of colonialism post colonial studies modern and contemporary history

Teaching Primary Mathematics George Booker, Denise Bond, Len Sparrow, Paul Swan, 2015-05-20 The fifth edition of Teaching Primary Mathematics has been significantly revised and updated for the current educational environment The organisation of the book has been redesigned to reflect feedback from readers and the approach taken by the Australian Curriculum Mathematics Teaching Primary Mathematics provides teachers and students with a sound framework for the successful teaching of mathematics to primary students It is suitable both as a core text for primary student teachers and as an indispensable reference for practicing primary teachers seeking to update their knowledge

The Greeks and the New Armand D'Angour, 2011-09-15 The Greeks have long been regarded as innovators across a wide range of fields in literature culture philosophy politics and science However little attention has been paid to how they thought and felt about novelty and innovation itself and to relating this to the forces of traditionalism and conservatism which were also present across all the various societies within ancient Greece What inspired the Greeks to embark on their unique and enduring innovations How did they think and feel about the new This book represents the first serious attempt to address these issues and deals with the phenomenon across all periods and areas of classical Greek history and thought Each chapter concentrates on a different area of culture or thought while the book as a whole argues that much of the impulse towards innovation came from the life of the polis which provided its setting

Masters of Mathematics Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It is not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics
