

Holography is a technique for creating three-dimensional photographs. Because these photographs were created without the use of a lens, the technique is also known as lensless photography. Holograms (Greek holos, "complete"; gram, "message") are the records. Dennis Gabor, a British physicist, invented the theoretical principles of holography in 1947. When the laser became available in the early 1960s, the first genuine fabrication of holograms took place. True-color holograms, as well as holograms extending from the microwave to the X-ray part of the spectrum, were conceivable by the late 1980s. Sound waves were also used to create ultrasonic holograms.

Holography is one of contemporary science and technology's most spectacular achievements. Holograms have the unique ability to restore high-quality volumetric images of real people. The word "holography" comes from the Greek words holos, which means "full record," and grapho, which means "write,".

Holography is a photographic method that differs from a traditional image in that it registers not only intensity in a photosensitive substance, but also phase of light waves scattered by the object, carrying the whole information about the item's three-dimensional structure. Holograms have a unique quality as a medium for mapping reality: unlike a regular photograph, a holographic image may reproduce a perfect three-dimensional reproduction of the original object. Such an image with a variety of perspectives, which changes with changes in supervision, has incredible realism and frequently resembles a real thing. Unlike photography or painting, holography can accurately depict three-dimensional objects. Everything your eyes see – size, shape, texture, and relative position – may be created by a hologram. When you touch a holographic image, however, all you get is focused light.

Holography's history

Holography has been known since 1947, when British scientist Dennis Gabor (a native of Hungary) developed the theory of holography while attempting to improve the resolution of an electron microscope. Gabor invented the term holography, which comes from the Greek words holos, which means "whole," and gramma, which means "message." Because the light sources available at the time were not completely "coherent," more advancement in the field took place throughout the next period.

The invention of the laser, whose clean, bright light was excellent for generating holograms, by Russian scientists N. Bassov and A. Prokhorov and American scientist Charles Towns with

Limbaugh,1996 This is a literary detective story Like all good stories it could begin Once upon a time Once upon a time in 1880 a young man named John Muir spent a day crossing a rugged glacier in Alaska Though he did not even think it worth recording in that evening s diary entry a little black dog accompanied him on that storm haunted trek As time passed the image of the dog and what it symbolized grew in Muir s mind entering his after dinner sessions of storytelling Seventeen years after the event the popular story of Stickeen finally saw print though in a form much edited from Muir s original Historian Ronald H Limbaugh here explains the mystery

of why John Muir struggled for so long to bring Stickeen to life Dr Limbaugh pursued the evolution of the tale through a previously underexplored resource the handwritten annotations Muir left in the volumes of his personal library His thorough study covers the oral and literary history of the adventure discusses its style content and sources and places it and Muir s difficulties in perfecting it in the context of some of the major concerns of the era particularly the Darwinian debates and the emerging animal rights movement Although the story of Stickeen has been published many times and in many forms since the 1897 article this is the first time Muir s original version has been printed It is set alongside other versions of the story including a sentimental version for children composed by Muir s niece and the original journal entry from which all versions emerged Perhaps best of all it is also set within the context of author Limbaugh s high readable lucid prose

Rumanian Folk Music Bela Bartok, 2012-12-06 n the first volume of Rumanian Folk Music Instrumental Melodies I portions of Bela Bartok s subsequently discarded preface concern ing the fate of his folklore publications are presented in explanation of the editorial processes necessary for achieving the publication 1 By way of introduction to this revised edition of a previous although in complete published version of the Rumanian Carols and Christmas Songs Colinde we refer again to the author s suppressed lines which pertain to this volume The second publication by the same publisher was to include my collection of Rumanian Colindas Winter solstice songs Their extremely interesting texts were supposed to appear in original as well as in English After several years of delay the translation to English prose was completed one part in adequate archaic English the rest by someone else in most unsuitable Kitchen English The publisher did not wish to change this though Result I published the book at my own expense however only the musical part because of lack of sufficient funds The texts are still in manuscript even today 2 Our primary aim therefore has been to unite the Rumanian poetic texts and translations with the musical part in one volume as was the desire of the author
