Metabolomics Xianquan Zhan, 2021-09-01 Metabolomics is the methodology and theory to study the metabolome including targeted approaches based on selected multiple reaction monitoring SRM MRM and untargeted approaches based on nuclear magnetic resonance NMR or mass spectrometry MS The metabolome contains all metabolites derived from sugars lipids proteins and nucleic acids in a given biological system tissue cell or body fluid in a metabolic network system Metabolomic variations directly link to molecular mechanisms of a disease reliable therapeutic targets and effective biomarkers for prediction diagnosis and prognostic assessment of disease This book presents new advances in the concept and methodology of metabolomics as well as applications of metabolomics in the research and practice of medical and life sciences Advances in the development and application of deep eutectic solvents Maria Luisa Di Gioia, Manoj B.

Gawande, Ana Rita Duarte, 2024-02-09 The continuous effort to perform a more sustainable chemistry has led to the development of new materials that accomplish the principles of green chemistry In this context deep eutectic solvents DESs have arisen as a new generation of solvents that respond well to most of the characteristics that an ideal green solvent must possess they are easy and cheap to prepare stable easy to handle they show chemical stability non flammability and conductivity separable from the reaction products biodegradable and safe for both humans and the environment At the same time they show chemical physical properties similar to ionic liquids such as low volatility conductivity and high solvent power These characteristics mean that DESs are today classified as 21st century solvents DESs have been raising a lot of attention and a sharp increase of their applications in numerous sectors of chemistry they are mainly used as alternative solvents and or catalysts for various organic transformations including metal catalyzed reactions biotransformations polymerization in sample preparation and analytical techniques as well as in the design of pharmaceutical formulations and drug delivery systems **Biomedical Aspects of Drug Targeting** Vladimir R. Muzykantov, Vladimir P. Torchilin, 2013-03-09 Drugs

usually have no natural affinity for the cells tissues and organs where therapeutic effects are needed which frequently results in low efficiency and unwanted side effects This concern is even more profound when using highly potent and cytotoxic anticancer drugs or specific agents such as enzymes and genetic materials since their effective and safe action requires precise cellular or even sub cellular addressing in the target organ To meet safety efficiency and specificity requirements drugs somehow must be targeted to the sites of their expected therapeutic action The idea of the magic bullet or drug targeting proposed by Erlich a century ago generates great and continuously growing interest in biomedical industrial and financial circles This book is focused on the strategies designed to target therapeutic or diagnostic agents to the disease sites In an attempt to include in this volume the set of chapters reflecting both traditional and emerging areas of drug targeting we have contacted many leading scientists in the field asking for their contributions Their responses were most favorable and encouraging As a result we have succeeded in assembling a series of outstanding contributions reflecting practically all the key areas of drug targeting The final structure of this book is as follows Cumulated Index Medicus ,1988 **Arthritis Research: Imaging inflamed synovial joints** Andrew P Cope,2007 Volumes are a compendium of data pertinent to the methods and protocols that have contributed to recent advances in molecular medicine in general but to the molecular basis of rheumatic disease in particular They detail novel technologies some of which are still evolving and whose impacts are yet to be determined Leaders in the field contribute to cover such exciting and cutting edge topics as imaging and immunohistochemistry analysis of cartilage and bone catabolism immunobiology and cell trafficking Biochemicals and Reagents ,
