correlated with their molecular structures for predictive purposes. However, this has made it necessary to critically re-appraise much of the earlier fundamental work so that current discussion of more recent work can be put on a proper basis. Thus, of the 1800 or so references cited, the middle two thirds related to the twenty-year period centred on about 1968. Nevertheless, sufficient key recent references have also been included so that the existing state of the art is delineated.
