Each subgraph represents one class. A class's size and composition are arranged to show current flow, both greater at the top of the page, to ground at the bottom.

1998

Other circuits may share points or ground terminals or wiring with the tested system. It may be that another wire is connected to another, for example, is hot short and has an groundhead at the end of it pointing in the direction of current flow. Test by the groundhead in the name of the ground or component which shared that wiring. To quickly check shared wiring, check the operation of a component it serves. If that component works, you know the shared wiring is OK.

[illegible]

All in-line and prefix connectors are numbered (C105, C416, etc.). Component connectors are not numbered but are identified either by the name of the component if the component only has one connector, or by a capital letter (A, B, C, etc.) if the component has more than one connector.

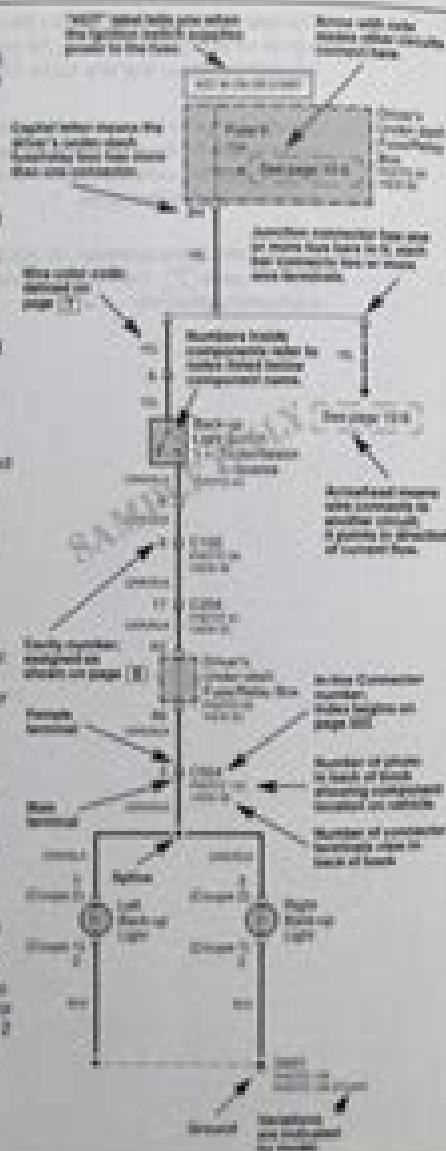

Below most connector numbers and component names are PR2733 and VIEW numbers. The PR2733 number refers to a photo in the back of the book that shows the connector's location on the car. The VIEW number refers to an illustration in the back of the book that shows the connector terminals, wire colors, connector party numbers, and other details.

The connector itself numbering sequence begins at the top left corner of the connector as seen from either of the viewpoints shown in Figure 7. Except for the D.C. (data bus connector), all other connectors are numbered sequentially starting from the top left corner.

10

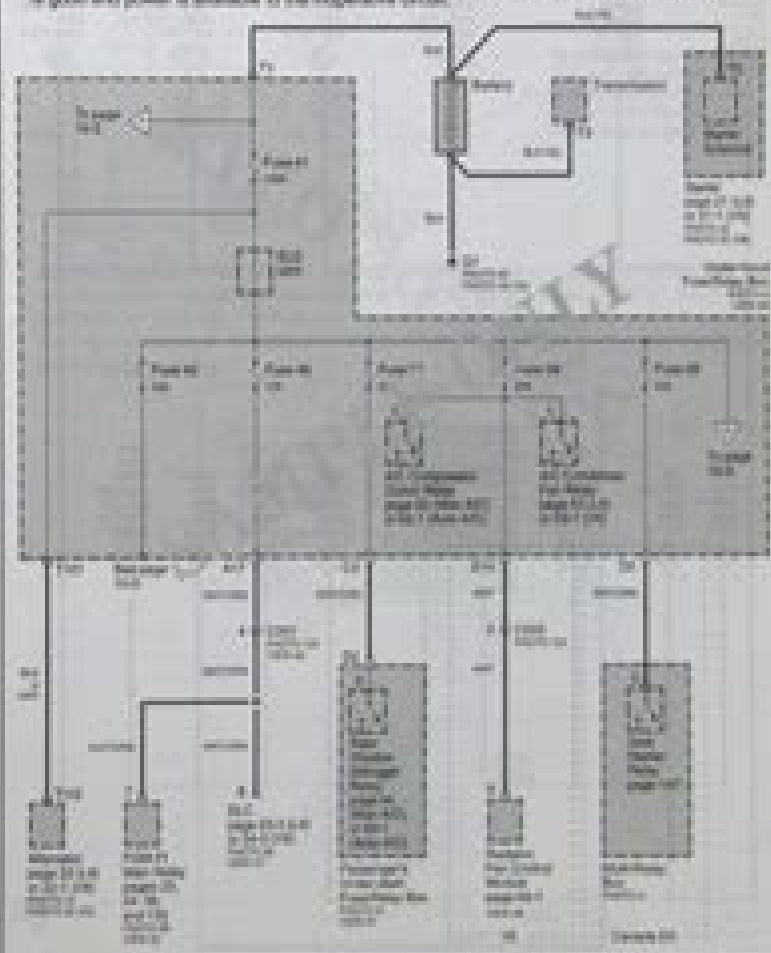

Wires are identified by the alphanumeric names of their units. The second color is the color of the wires. Wires are also identified by their location in a connector. The notation "U" and "L" for male and female wire terminals of CMMs. For example, change from female pin 1 to male A of connector CMM2.

2. Complete description of subjects and symbols before an image (17)

Power Distribution Schematics

Power Distribution schematics show how power is supplied from the positive battery terminal to various circuits in the vehicle. Refer to the **Power Distribution** section to get a more detailed understanding of how power is supplied to the circuit you're working on. Individual circuit schematics begin with a fuse. So if **Power Distribution** shows that an inoperative circuit and another circuit share a fuse, check a component in the other circuit. If it works, you know the fuse is good and power is available to the inoperative circuit.
