

1st Semester Biology Exam

1. Written Exam

- a. You will have multiple choice questions, true false questions and open ended questions where you fill in the blanks.
- b. During the first semester we covered Units 1 to 6 in the book, but the exam will only be over Units 1 to 5 which cover chapters 1 through 17.
- c. Read the chapter assessments for those 17 chapters. The final exam will have most of the questions taken from those chapter assessments. For instance for Chapter 10 (Mendel and Meiosis), know how to answer the questions on page 279
- d. Students will be given the opportunity to earn extra credit to boost their exam grade by completing a Biology related project.
- e. The question topics are as follows:
 1. List (4) evidence supporting an endosymbiotic origin of mitochondria and chloroplasts.
 2. Marsupials probably evolved in what is now North America and Asia, yet their diversity is found in Australia. How can you account for this biogeographic distribution?
 3. How did Melvin Calvin and his students discover the sugar-producing cycle of photosynthesis?
 4. Experiments with artificial membranes have added to our understanding of the structure and function of the plasma membrane.
 5. How do we know DNA is the genetic material?
 6. X-ray diffraction, model building, and analysis of base pairing led to the development of the double helix model of DNA.
 7. What can long-term ecological research teach us about human impact on the biosphere?
 8. Measurements of rates of transpiration using parts of plants have helped biologists understand the role of the roots and the leaves.
 9. Name the special molecule that sets living things apart from the nonliving world and be able to explain why this molecule is important.
 10. The cell is considered to be the basic living unit. Be able to distinguish between single-celled organisms and multicellular organisms.
 11. Be able to arrange in order, from smallest to largest, the levels of organization that occur in nature and to write a brief description of each.
 12. What does the term metabolism mean to the cell and the organism?
 13. Organisms use a molecule known as ATP to transfer chemical energy from one molecule to another. Why is this essential for living things to exist?
 14. Homeostasis is defined as a state in which the conditions of an organism's internal environment are maintained within tolerable limits. What mechanisms in your body are involved with homeostasis?
 15. Reproduction is the means by which each new organism arises. Why is this an essential characteristic of life?
 16. How are DNA and cellular reproduction linked in the process of inheritance?
 17. A trait that assists an organism in survival and reproduction in a certain environment is said to be adaptive. What sorts of adaptive traits do you have? How do they aid your survival?
