applications of nonlinear mathematical models in solving technological problems is increasing The aim of the book *Advances in Flight Control Systems* is to bring together reputable researchers from different countries in order to provide a comprehensive coverage of advanced and modern topics in flight control not yet reflected by other books This product comprises 14 contributions submitted by 38 authors from 11 different countries and areas It covers most of the currents main streams of flight control researches ranging from adaptive flight control mechanism fault tolerant flight control acceleration based flight control helicopter flight control comparison of flight control systems and fundamentals According to these themes the contributions are grouped in six categories corresponding to six parts of the book
