Remboutsika, Thimios Mitsiadis, 2021-11-23 *Advances in Plant Omics and Systems Biology Approaches* Flavia Vischi Winck, 2022-02-03 In the post genomic era several plant species have been sequenced and massive genomic information is now available which contributed to expand the development of novel technical strategies for the study of additional levels of biological information of plant species This book focuses on the omics approaches together with systems analysis of several different plant species which have revealed very interesting variations on the cellular responses at the protein transcript and metabolite levels in response to changes environmental conditions The volume covers recent technological advances in the area of omics and synthesizes recent findings of the field of plant omics and systems biology together along with techniques that can be applied for such studies **Machine Learning and Mathematical Models for Single-Cell Data Analysis** Le Ou-Yang, Xiaofei Zhang, Jiajun Zhang, Jin Chen, Min Wu, 2022-11-29 *COVID-19: Mid- and Long-Term Educational and Psychological Consequences for Students and Educators* Isabel Morales-Muñoz, Ricardo Scott, Maria Jose Alvarez-Alonso, 2022-05-23 **Habits: plasticity, learning and freedom** Javier Bernacer, Jose Angel Lombo, Jose Ignacio Murillo, 2015-11-05 In present times certain fields of science are becoming aware of the necessity to go beyond a restrictive specialization and establish an open dialogue with other disciplines Such is the case of the approach that neuroscience and

philosophy are performing in the last decade However this increasing interest in a multidisciplinary perspective should not be understood in our opinion as a new phenomenon but rather as a return to a classical standpoint a proper understanding of human features organic cognitive volitional motor or behavioral for example requires a context that includes the global dimension of the human being We believe that grand neuroscientific conclusions about the mind should take into account what philosophical reflection has said about it likewise philosophers should consider the organic constitution of the brain to draw inferences about the mind Thus both neuroscience and philosophy would benefit from each other s achievements through a fruitful dialogue One of the main problems a multidisciplinary group encounters is terminology the same term has a different scope in various fields sometimes even contradictory Such is the case of habits from a neuroscientific perspective a habit is a mere automation of an action It is therefore linked to rigidity and limitation However from a classical philosophical account a habit is an enabling capacity acquired through practice which facilitates improves and reinforces the performance of certain kind of actions From neuroscience habit acquisition restricts a subject s action to the learnt habit from philosophy habit acquisition allows the subject to set a distance from the simple motor performance to cognitively enrich the action For example playing piano is a technical habit considering the neuroscientific account a pianist would just play those sequences of keystrokes that had been repeatedly practiced in the past However according to the philosophical perspective it would allow the pianist to improvise and moreover go beyond the movements of their hands to concentrate in other features of musical interpretation In other words a holistic view of habits focuses on the subject s disposition when facing both known and novel situations We believe neuroscience could contribute to achieve a deeper understanding of the neural bases of habits whose complexity could be deciphered by a philosophical reflection Thus we propose this Research Topic to increase our understanding on habits from a wide point of view This collection of new experimental research empirical and theoretical reviews general commentaries and opinion articles covers the following subjects habit learning implicit memory computational and complex dynamical accounts of habit formation practical cognitive perceptual and motor habits early learning intentionality consciousness in habits performance neurological and psychiatric disorders related to habits such as obsessive compulsive disorder stereotypies or addiction habits as enabling or limiting capacities for the agent

Abiotic Selection in Earth Surface Systems Jonathan D. Phillips, 2025-07-22 This book is about abiotic selection in Earth surface systems It demonstrates that seemingly purposeful or goal oriented phenomena in Earth s processes actually emerge from selection dynamics While many think of selection in the context of biological evolution it extends to abiotic processes crucial in understanding Earth s function and evolution The author delineates four forms of geophysical selection gradient resistance network and thermodynamic These selections manifest in various natural systems from fluid flows shaping landscapes to the efficient transport of mass and energy The book acknowledges the interplay of geophysical and ecological processes employing them as pedagogical tools Structured with an introduction to abiotic selection and its context the book

delves into the application of key principles such as thermodynamics and flow dynamics to Earth surface systems Each subsequent chapter examines one of the four types of selection featuring diverse real world examples from climate dynamics to oceanography Geared toward researchers graduate students and practitioners in fields such as geophysics geology geography hydrology and ecosystem sciences it also appeals to those interested in evolutionary thinking beyond traditional life sciences

Self-regulated Learning in Online Settings Danial Hooshyar, Jaclyn Broadbent, Paula De Barba, Erin Peters-Burton, 2022-09-12

Biodiversity Edmundas Lekevičius, 2022-09-20 Species are not functionally independent From a long term perspective only ecosystem with a fully integrated nutrient cycle is alive The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity The variability of abiotic conditions both in space and in time also creates a huge diversity of niches and subniches for genotypes and species In addition life maintains its essential variables biomass and productivity as stable as possible due to the diversity of structures genes macromolecules metabolic pathways genotypes species etc the structures that reach optima are multiplied and thus activated while the functioning of those which lost their optima is suppressed The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation b biodiversity helps to stabilise the functions essential variables of individuals populations and ecological communities c in evolution the emergence of biodiversity is determined by heritable variation and the advantage of specialised more effective structures over non specialised ones d biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures which we call production pyramids and nutrient cycles This book therefore provides an answer to the question why the diversity of life is of such and such a nature
