Evidence-Guided Practice Bonnie Van Lunen,Dorice Hankemeier,Cailee Welch,2024-06-01 Athletic trainers must have a foundation in the concepts of evidence based practice to deliver patient care in an effective way It is critical that students and clinicians formulate clinical plans that will be effective for individual patients With that goal in mind Evidence Guided Practice A Framework for Clinical Decision Making in Athletic Training teaches the athletic trainer that evidence based practice concepts must be incorporated into daily clinical practice Written in a conversational tone Drs Bonnie Van Lunen

Dorice Hankemeier and Cailee Welch provide a practical and concise resource for athletic trainers to use when interpreting what the available evidence means for them and how it can be effectively applied in daily patient care. The competencies within athletic training and other health care professions were considered when each chapter was constructed. Special care was taken to include examples that are specific to athletic training and instructional applications for educators. What Is Inside: Types of research design, Foundations of research and statistics, Introduction to critical appraisal, Concepts of validity, Diagnostic accuracy, Disablement models, Patient oriented outcome assessments, Health care informatics. The first of its kind, *Evidence Guided Practice: A Framework for Clinical Decision Making in Athletic Training* is the only resource athletic training students, clinicians, or other health care professionals will need to properly put evidence based concepts into practice.

Information Storage and Retrieval Systems Gerald J. Kowalski,Mark T. Maybury,2000-09-30 Chapter 1 places into perspective a total Information Storage and Retrieval System This perspective introduces new challenges to the problems that need to be theoretically addressed and commercially implemented Ten years ago commercial implementation of the algorithms being developed was not realistic allowing theoreticians to limit their focus to very specific areas Bounding a problem is still essential in deriving theoretical results But the commercialization and insertion of this technology into systems like the Internet that are widely being used changes the way problems are bounded From a theoretical perspective efficient scalability of algorithms to systems with gigabytes and terabytes of data operating with minimal user search statement information and making maximum use of all functional aspects of an information system need to be considered The dissemination systems using persistent indexes or mail files to modify ranking algorithms and combining the search of structured information fields and free text into a consolidated weighted output are examples of potential new areas of investigation The best way for the theoretician or the commercial developer to understand the importance of problems to be solved is to place them in the context of a total vision of a complete system Understanding the differences between Digital Libraries and Information Retrieval Systems will add an additional dimension to the potential future development of systems The collaborative aspects of digital libraries can be viewed as a new source of information that dynamically could interact with information retrieval techniques
