Read from Lesson 3 of the Waves chapter at The Physics Classroom:

MCOP Connections:

Waves: sublevel 5

## Background:

The behavior of a traveling wave (or pulse) upon reaching the end of a medium is referred to as boundary behavior. When one medium ends, another medium begins; the interface of the two media is referred to as the boundary and the behavior of a wave at that boundary is described as its boundary behavior. A pulse that is approaching a boundary is referred to as the incident pulse. Upon reaching the boundary, a portion of the incident pulse will be reflected and remain in the same medium; and a portion of the incident pulse will pass into (or be transmitted into) the other medium which lies beyond the boundary. The portion of the pulse that is reflected is referred to as the reflected pulse and the portion that passes into the other medium is referred to as the transmitted pulse. A proper understanding of the boundary behavior of waves involves an ability to answer the following questions.

## Fixed and Free End Reflections

1. State the rule that describes how a pulse will behave at a free end and a fixed end.
2. Express your understanding of reflection of waves at the end of a medium by drawing the size and orientation of the reflected pulse for the two cases below - reflection off a free end and a fixed end.

## Fixed End Reflection

## Free End Reflection

## Reflection and Transmission of an Incident Pulse at a Boundary Between Two Media

A pulse is moving from a more-dense medium to a less-dense medium as shown in the diagram below.

3. The reflected pulse in medium 1 \_\_\_\_\_ (will, will not) be inverted because \_\_\_\_\_.
4. The speed of the transmitted pulse will be \_\_\_\_\_ (greater than, less than, the same as) the speed of the incident pulse.
5. The speed of the reflected pulse will be \_\_\_\_\_ (greater than, less than, the same as) the speed of the incident pulse.
6. The wavelength of the transmitted pulse will be \_\_\_\_\_ (greater than, less than, the same as) the wavelength of the incident pulse.

**Several Complex Variables** KOHN,LU,REMMERT,SIU,2012-12-06 In recent years there has been increasing interaction among various branches of mathematics This is especially evident in the theory of several complex variables where fruitful interplays of the methods of algebraic geometry differential geometry and partial differential equations have led to unexpected insights and new directions of research In China there has been a long tradition of study in complex analysis differential geometry and differential equations as interrelated subjects due to the influence of Professors S S Chern and L K Hua After a long period of isolation in recent years there is a resurgence of scientific activity and a resumption of scientific exchange with other countries The Hangzhou conference is the first international conference in several complex variables held in China It offered a good opportunity for mathematicians from China U S Germany Japan Canada and France to meet and to discuss their work The papers presented in the conference encompass all major aspects of

several complex variables in particular in such areas as complex differential geometry integral representation boundary behavior of holomorphic functions invariant metrics holomorphic vector bundles and pseudoconvexity Most of the participants wrote up their talks for these proceedings Some of the papers are surveys and the others present original results This volume constitutes an overview of the current trends of research in several complex variables *Regularity Estimates for Nonlinear Elliptic and Parabolic Problems* John Lewis, Peter Lindqvist, Juan J. Manfredi, Sandro Salsa, 2012-03-02 The issue of regularity has played a central role in the theory of Partial Differential Equations almost since its inception and despite the tremendous advances made it still remains a very fruitful research field In particular considerable strides have been made in regularity estimates for degenerate and singular elliptic and parabolic equations over the last several years and in many unexpected and challenging directions Because of all these recent results it seemed high time to create an overview that would highlight emerging trends and issues in this fascinating research topic in a proper and effective way The course aimed to show the deep connections between these topics and to open new research directions through the contributions of leading experts in all of these fields Elliptic Partial Differential Equations of Second Order D. Gilbarg, N. S. Trudinger, 2013-03-09 This volume is intended as an essentially self contained exposition of portions of the theory of second order quasilinear elliptic partial differential equations with emphasis on the Dirichlet problem in bounded domains It grew out of lecture notes for graduate courses by the authors at Stanford University the final material extending well beyond the scope of these courses By including preparatory chapters on topics such as potential theory and functional analysis we have attempted to make the work accessible to a broad spectrum of readers Above all we hope the readers of this book will gain an appreciation of the multitude of ingenious barehanded techniques that have been developed in the study of elliptic equations and have become part of the repertoire of analysis Many individuals have assisted us during the evolution of this work over the past several years In particular we are grateful for the valuable discussions with L M Simon and his contributions in Sections 15 4 to 15 8 for the helpful comments and corrections of J M Cross A S Geue J Nash P Trudinger and B Turkington for the contributions of G Williams in Section 10 5 and of A S Geue in Section 10 6 and for the impeccably typed manuscript which resulted from the dedicated efforts of Isolda Field at Stanford and Anna Zalucki at Canberra The research of the authors connected with this volume was supported in part by the National Science Foundation Elliptic Partial Differential Equations of Second Order David Gilbarg, Neil S. Trudinger, 2015-03-30 From the reviews This is a book of interest to any having to work with differential equations either as a reference or as a book to learn from The authors have taken trouble to make the treatment self contained It is suitable required reading for a PhD student Although the material has been developed from lectures at Stanford it has developed into an almost systematic coverage that is much longer than could be covered in a year s lectures Newsletter New Zealand Mathematical Society 1985 as should be clear from the previous discussion this book is a bibliographical monument to the theory of both theoretical and applied PDEs that has not acquired any flaws due to its

age On the contrary it remains a crucial and essential tool for the active research in the field In a few words in my modest opinion this book contains the essential background that a researcher in elliptic PDEs should possess the day s he gets a permanent academic position SIAM Newsletter
