3A J.D. Holmes, 2012-12-02 *Wind Engineering 1983* Part A contains the proceedings of the Sixth International Conference on
Wind Engineering held in Gold Coast Australia on March 21 25 1983 and in Auckland New Zealand on April 6 7 1983 under
the auspices of the International Association for Wind Engineering The conference provided a forum for discussing topics
related to wind energy and wind engineering from wind characteristics and wind loading to full scale measurement and
modeling of buildings and other structures Comprised of 36 chapters this volume begins with an assessment of the wider
application of reliability principles in the treatment of wind loading paying particular attention to the influence of wind
direction and the role of full scale testing in reducing uncertainty The reader is then introduced to wind characteristics with
emphasis on strong winds and tropical cyclones wind loading of tall buildings and low rise structures and instrumentation
and experimental techniques for wind loading The base balance technique for the determination of dynamic wind loads is
described along with a detailed design method for pneumatic tubing systems and a digital system for the measurement of
wind effects on large structures The final two chapters deal with active modeling of large scale turbulence and selection of
local peak pressure coefficients for wind tunnel studies of buildings This monograph will be of interest to students
practitioners and researchers concerned with wind energy and wind engineering *NIST Serial Holdings* National Institute
