A Math Primer For Engineers Studies In Health Technology And Informatics:

A Math Primer for Engineers C.W. Cryer, 2014-03-04 Mathematics and engineering are inevitably interrelated and this interaction will steadily increase as the use of mathematical modelling grows. Although mathematicians and engineers often misunderstand one another their basic approach is quite similar as is the historical development of their respective disciplines. The purpose of this Math Primer is to provide a brief introduction to those parts of mathematics which are or could be useful in engineering especially bioengineering. The aim is to summarize the ideas covered in each subject area without going into exhaustive detail. Formulas and equations have not been avoided but every effort has been made to keep them simple in the hope of persuading readers that they are not only useful but also accessible. The wide range of topics covered includes introductory material such as numbers and sequences, geometry in two and three dimensions, linear algebra and the calculus. Building on these foundations, linear spaces, tensor analysis and Fourier analysis are introduced. All these concepts are used to solve problems for ordinary and partial differential equations. Illustrative applications are taken from a variety of engineering disciplines and the choice of a suitable model is considered from the point of view of both the mathematician and the engineer. This book will be of interest to engineers and bioengineers looking for the mathematical means to help further their work and it will offer readers a glimpse of many ideas which may spark their interest.

pHealth 2014 B. Blobel, S. Sauermann, A. Mense, 2014-05-30 Microsystems, smart textiles, telemedicine, mobile computing, smart implants, sensor controlled medical devices and innovative sensor and actuator principles and techniques have become important enablers not only for monitoring, diagnosis and treatment in both inpatient and outpatient care but also for personalized, preventive, predictive, participative systems medicine. This book contains the proceedings of pHealth 2014, the 11th in a series of successful international conferences on wearable or implantable micro and nano technologies for personalized medicine, held in Vienna, Austria, in June 2014. This conference combined the presentation of emerging principles, future visions and use with a careful analysis of lessons learned from international and national research and development activities and practical solutions. Included here are the keynotes as well as the oral presentations and poster presentations selected after having been checked by three independent reviewers for inclusion in the conference. The new EU Framework Program for Research and Innovation Horizon 2020, addressing pHealth implementation by focusing on technology transfer, support and building ecosystems and value chains to ensure better time to market and higher impact of knowledge based technologies, is properly reflected as well. The advances made so far in this field are just the beginning of evolutionary and revolutionary changes which will offer significant opportunities for patients and healthcare professionals alike and this book will be of interest to all those developing, providing or receiving such healthcare services.
