Molecular Structure, Function, and Assembly of the ATP Synthases Sangkot Marzuki, 2012-12-06

In recent years the ATP synthase H ATPase FoF₁ATPase has been the subject of intensive investigations in many laboratories. The major reason for this lies in the fact that this enzyme complex catalyses one of the most important reactions in living cells namely the synthesis of ATP utilizing the energy from an electrochemical transmembrane H⁺ gradient generated by the cellular respiratory chain or by the light reactions of photosynthetic organisms. The mechanism by which the H⁺ motive force is utilized to drive the synthesis of ATP is one of the major unsolved problems in biochemistry. Thus the fundamental information concerning the molecular structure and the mechanism of assembly of the ATP synthase is of major significance in cell biology. A seminar/workshop on the Molecular Structure Function and Assembly of the ATP synthases was held in April 1987 at the East West Center University of Hawaii Honolulu Hawaii to promote exchange of information between laboratories actively engaged in the study of the ATP synthases and to provide a forum for discussion and

coordination of data derived from molecular genetic and biochemical approaches used in different laboratories This volume summarizes the result of the seminar workshop in the form of a collection of papers presented at the meeting and provides an overview of current work in this rapidly progressing area of research **ATP Synthase in Photosynthetic Organisms**
