systematic search for the basic principles and the study of inequalities for their own sake. On the other hand the subject is the source of ingenious ideas and methods that give rise to seemingly elementary but nevertheless serious and challenging problems. There are numerous applications in a wide variety of fields from mathematical physics to biology and economics. This volume contains the contributions of the participants of the Conference on Inequalities and Applications held in Noszvaj Hungary in September 2007. It is conceived in the spirit of the preceding volumes of the General Inequalities meetings held in Oberwolfach from 1976 to 1995 in the sense that it not only contains the latest results presented by the participants but it is also a useful reference book for both lecturers and research workers. The contributions reflect the ramification of general inequalities into many areas of mathematics and also present a synthesis of results in both theory and practice.

*New Perspectives on the Theory of Inequalities for Integral and Sum* Nazia Irshad, Asif R. Khan, Faraz Mehmood, Josip Pečarić, 2022-03-29. This book provides new contributions to the theory of inequalities for integral and sum and includes four chapters. In the first chapter linear inequalities via interpolation polynomials and green functions are discussed. New results related to Popoviciu type linear inequalities via extension of the Montgomery identity, the Taylor formula, Abel, Gontscharoff's interpolation polynomials, Hermite interpolation polynomials and the Fink identity with Green's functions are presented. The second chapter is dedicated to Ostrowski's inequality and results with applications to numerical integration and probability theory. The third chapter deals with results involving functions with nondecreasing increments. Real life applications are discussed as well as the connection of functions with nondecreasing increments together with many important concepts including arithmetic integral mean, Wright convex functions, convex functions, nabla convex functions, Jensen m-convex functions, m-convex functions, m-nabla convex functions, k-monotonic functions, absolutely monotonic functions, completely monotonic functions, Laplace transform and exponentially convex functions by using the finite difference operator of order m. The fourth chapter is mainly based on Popoviciu and Cebaysev Popoviciu type identities and inequalities. In this last chapter the authors present results by using delta and nabla operators of higher order.
