The materials life cycle consists of several phases. If application areas are targeted for architecture, comprehending the demands of the end-use phase might not be clear at the research and development phase, leading to an entity appearing fragmented. The aim of this study is to help bring order to the material research or development phases. The objective is to generate a review tool, which helps to observe different areas where architecture operates, and contemplate simultaneously the aspects during the different phases of the material development. The review tool of the material life cycle consists of tracking the raw materials until the re-used raw material, resulting in eight different stages of the material life cycle. In addition, each of the eight stages of the material life cycle is possible to observe with the five different viewpoints, which are present in architecture. These eight material life cycle stages and five aspects have been formulated as a chart. The chart consists of 40 different approaches facilitating discussion between different operators during the different phases of the material development. The chart might help set goals, frame areas, and improve comprehension of the research and development processes of the materials, especially when interdisciplinarity is involved in the research process.

**Keywords:** architecture, interdisciplinarity, materials development, materials life cycle, materials research.

In architecture, construction materials have certain characteristics and aspects to fulfil depending on where and how they are applied. Traditionally, practitioners have obtained an intrinsic understanding of the materials by gathering knowledge when interacting with the materials on a practical level. Professionals, who are specialised in understanding the role of materials or methods in constructing, such as construction workers, craftspeople, builders, and architects, must understand the relatively simple processes involved therein. Due to this basic understanding, the communication between professionals is effortless because the targets are easy to discuss; the concepts are clear; and the materials or processes are well known. Though, when new technologies or materials are intended to be applied in the construction industry, special expertise is required (Gieseckam et al 2016).

In architecture, materials are not just thought to constitute the protective shells, carry loads, or divide spaces. The material palette utilised in architecture is in general extremely versatile. Different materials must play well together leading to a meaningful and pleasant spatial experience, noting the function of the building, demands of the user, cultural aspects of the context, and overall cost of the constructing. Without a holistic perspective, the outcomes might be very practical or technically competent, but they may not necessarily be easy to implement in a living environment, where various aspects are meaningful.

The Structure of Multimodal Dialogue II M. M. Taylor, F. Néel, Don G. Bouwhuis, 2000 Most dialogues are multimodal When people talk they use not only their voices but also facial expressions and other gestures and perhaps even touch When computers communicate with people they use pictures and perhaps sounds together with textual language and when people communicate with computers they are likely to use mouse gestures almost as much as words How are such multimodal dialogues constructed This is the main question addressed in this selection of papers of the second Venaco Workshop sponsored by the NATO Research Study Group RSG 10 on Automatic Speech Processing and by the European Speech Communication Association ESCA **Agricultural Research in an Era of Adjustment** Steven R. **Proceedings of the Symposium on Ecosystem Management Research in the Ouachita Mountains** ,1994 *Narrative Pedagogy* Ivor Goodson,Scherto

Gill,2011 It is widely recognised that we are living through an age of the narrative Many of the constituent disciplines in the social sciences resonate with this trend by using life history and narrative approaches and methods As we move on from the modernist period which prioritised objectivity into the postmodern regard for subjectivity this resort to narrative is likely to become more apparent and explicit in academic as well as social and commercial discourse One aspect of this narrative form which is commonly overlooked is that of the pedagogic encounter This is the phenomenon which is addressed by all narrative and biographical research Fundamentally reflecting and examining the narrative of our lives in the process of learning this book provides a series of studies and guidelines for what we have termed narrative pedagogy It presents a resource for an exploration of those narrative processes that can lead to meaningful change and development for individuals and groups within a learning environment and in life learning This focus on life history allows us to identify and support routes to learning within the narrative landscape of learners and through these pedagogic encounters
