Agent-Based Modelling and Geographical Information Systems Andrew Crooks, Nicolas Malleon, Ed Manley, Alison Heppenstall, 2018-12-13 This is the era of Big Data and computational social science It is an era that requires tools which can do more than visualise data but also model the complex relation between data and human action and interaction Agent Based Models ABM computational models which simulate human action and interaction do just that This textbook explains how to design and build ABM and how to link the models to Geographical Information Systems It guides you from the basics through to constructing more complex models which work with data and human behaviour in a spatial context All of the fundamental concepts are explained and related to practical examples to facilitate learning with models developed in NetLogo with all code examples available on the accompanying website You will be able to use these models to develop your own applications and link where appropriate to Geographical Information Systems All of the key ideas and methods are explained in detail geographical modelling an introduction to ABM the fundamentals of Geographical Information Science why ABM and GIS using QGIS designing and building an ABM calibration and validation modelling human behavior An applied primer that provides fundamental knowledge and practical skills it will provide you with the skills to build and run your own models and to begin your own research projects

Agent-based Modeling and Simulation in Archaeology Gabriel Wurzer, Kerstin Kowarik, Hans Reschreiter, 2014-11-08 Archaeology has been historically reluctant to embrace the subject of agent based simulation since it was seen as being used to re enact and visualize possible scenarios for a wider generally non scientific audience based on scarce and fuzzy data Furthermore modeling in exact terms and programming as a means for producing agent based simulations were simply beyond the field of the social sciences This situation has changed quite drastically with the advent of the internet age Data it seems is now ubiquitous Researchers have switched from simply collecting data to filtering selecting and deriving insights in a cybernetic manner Agent based simulation is one of the tools used to glean information from highly complex excavation sites according

to formalized models capturing essential properties in a highly abstract and yet spatial manner As such the goal of this book is to present an overview of techniques used and work conducted in that field drawing on the experience of practitioners

Uncertainty and Sensitivity Analysis in Archaeological Computational Modeling Marieka Brouwer Burg, Hans Peeters, William A. Lovis, 2016-05-18 This volume deals with the pressing issue of uncertainty in archaeological modeling Detecting where and when uncertainty is introduced to the modeling process is critical as are strategies for minimizing reconciling or accommodating such uncertainty Included chapters provide unique perspectives on uncertainty in archaeological modeling ranging in both theoretical and methodological orientation The strengths and weaknesses of various identification and mitigation techniques are discussed in particular sensitivity analysis The chapters demonstrate that for archaeological modeling purposes there is no quick fix for uncertainty indeed each archaeological model requires intensive consideration of uncertainty and specific applications for

calibration and validation As very few such techniques have been problematized in a systematic manner or published in the archaeological literature this volume aims to provide guidance and direction to other modelers in the field by distilling some basic principles for model testing derived from insight gathered in the case studies presented Additionally model applications and their attendant uncertainties are presented from distinct spatio temporal contexts and will appeal to a broad range of archaeological modelers This volume will also be of interest to non modeling archaeologists as consideration of uncertainty when interpreting the archaeological record is also a vital concern for the development of non formal or implicit models of human behavior in the past

Applied Spatial Modelling and Planning John R. Lombard, Eliahu Stern, Graham Clarke, 2016-10-04 This book highlights the extraordinary range of areas to which geographical analysis and spatial modelling can bring lessons and insights It shows how these techniques have been used to address real world issues that are of concern to international organisations public agencies and businesses as illustrated by actual funded projects that geographers have developed collaboratively with end users Applied Spatial Modelling and Planning shows how much geographical research is policy relevant to a wide variety of agencies through the use of GIS and spatial modelling in applied geography The book's chapters contain a cross section of innovative applications and approaches to problem solving within five major domains of the dynamics of economic space housing and settlements population movements and population ageing health care and the environment Using a number of case studies on the use of GIS and spatial modelling this book demonstrates the fact that much of what is done by quantitative geographers is not only relevant within academia but also has use in policy work This book will appeal to an international audience interested in cutting edge spatial modelling to better understand the processes involved in solving real problems
