Animal Behavior And Wildlife Conservation:

Animal Behavior and Wildlife Conservation Marco Festa-Bianchet, Marco Apollonio, 2013-04-09 Efforts to conserve wildlife populations and preserve biological diversity are often hampered by an inadequate understanding of animal behavior How do animals react to gaps in forested lands or to sport hunters Do individual differences in age sex size past experience affect how an animal reacts to a given situation Differences in individual behavior may determine the success or failure of a conservation initiative yet they are rarely considered when strategies and policies are developed Animal Behavior and Wildlife Conservation explores how knowledge of animal behavior may help increase the effectiveness of conservation programs The book brings together conservation biologists wildlife managers and academics from around the world to examine the importance of general principles the role played by specific characteristics of different species and the importance of considering the behavior of individuals and the strategies they adopt to maximize fitness Each chapter begins by looking at the theoretical foundations of a topic and follows with an exploration of its practical implications A concluding chapter considers possible future contributions of research in animal behavior to wildlife conservation *Behaviour and Conservation* L. Morris Gosling, William J. Ignoring Nature No More Marc Bekoff, 2024-05-31 For far too long humans have been ignoring nature As the most dominant overproducing overconsuming big brained big footed arrogant and invasive species ever known we are wrecking the planet at an unprecedented rate And while science is important to our understanding of the impact we have on our environment it alone does not hold the answers to the current crisis nor does it get people to act In *Ignoring Nature No More* Marc Bekoff and a host of renowned contributors argue that we need a new mind set about nature one that centers on empathy compassion and being proactive This collection of diverse essays is the first book devoted to compassionate conservation a growing global movement that translates discussions and concerns about the well being of individuals species populations and ecosystems into action Written by leading scholars in a host of disciplines including biology psychology

sociology social work economics political science and philosophy as well as by locals doing fieldwork in their own countries the essays combine the most creative aspects of the current science of animal conservation with analyses of important psychological and sociocultural issues that encourage or vex stewardship The contributors tackle topics including the costs and benefits of conservation behavioral biology media coverage of animal welfare conservation psychology and scales of conservation from the local to the global Taken together the essays make a strong case for why we must replace our habits of domination and exploitation with compassionate conservation if we are to make the world a better place for nonhuman and human animals alike
