

An aerial photograph of a river delta, likely the Amazon, at sunset. The sun is a bright, glowing orb on the horizon, casting a long, shimmering path of light across the water. The river branches out into a complex network of channels and islands, with the water reflecting the golden light of the setting sun. The sky is a deep orange, and the water is a mix of dark and light patches.

Aquatic Functional Biodiversity An Ecological And Evolutionary Perspective:

Aquatic Functional Biodiversity Andrea Belgrano, Guy Woodward, Ute Jacob, 2015-07-25 Aquatic Functional Biodiversity An Ecological and Evolutionary Perspective provides a general conceptual framework by some of the most prominent investigators in the field for how to link eco evolutionary approaches with functional diversity to understand and conserve the provisioning of ecosystem services in aquatic systems Rather than producing another methodological book the editors and authors primarily concentrate on defining common grounds connecting conceptual frameworks and providing examples by a more detailed discussion of a few empirical studies and projects which illustrate key ideas and an outline of potential future directions and challenges that are expected in this interdisciplinary research field Recent years have seen an explosion of interest in using network approaches to disentangle the relationship between biodiversity community structure and functioning Novel methods for model construction are being developed constantly and modern methods allow for the inclusion of almost any type of explanatory variable that can be correlated either with biodiversity or ecosystem functioning As a result these models have been widely used in ecology conservation and eco evolutionary biology Nevertheless there remains a considerable gap on how well these approaches are feasible to understand the mechanisms on how biodiversity constrains the provisioning of ecosystem services Defines common theoretical grounds in terms of terminology and conceptual issues Connects theory and practice in ecology and eco evolutionary sciences Provides examples for successful biodiversity conservation and ecosystem service management

Perspectives on Global Biodiversity Scenarios and Environmental Services in the 21st Century Chourasia, Naveen Kumar, Chahal, Kavita, 2023-11-01 Quantitative models are increasingly being used to assess the impact of socioeconomic development pathways on biodiversity and environmental services Regardless of the scenario the decline of biodiversity will continue throughout the 21st century Land use changes drive biodiversity changes in terrestrial systems while overfishing drives changes in marine systems and climate change affects all realms The loss of habitats will lead to local population decreases and global extinctions will occur at unpredictable rates due to the lag between environmental changes and their effects To address this we need to focus more on the relationship between the decline of ecosystem services and the position of species responsible for that function in the trophic hierarchy Perspectives on Global Biodiversity Scenarios and Environmental Services in the 21st Century makes biodiversity scenarios understandable relevant and valuable to stakeholders by using effective language and focused communication techniques Instead of merely showing the potential effects of global change on biodiversity scenarios should consider the feedback connecting environmental forces Biodiversity provides numerous essential environmental services crucial to human well being both now and in the future The climate is a critical component of ecosystem functioning and directly and indirectly affects human health The target audience includes biology and environmental science students and faculty scientists social workers who generate and collaborate on biodiversity scenarios policymakers and corporations with a

Effects of Non-Random Sources of Alteration on Biodiversity and Ecosystem Functioning Tian Zhao, Chuanbo

Guo, Chao Wang, Chunsheng Liu, Paraskevi Manolaki, 2023-11-15 Understanding how biological diversity affects ecosystem functioning is a key question in modern ecology This is of particular importance in the general context of recent global changes caused by human activities such as water abstraction flow regulation shifts in agricultural practices contamination climate changes and biological invasions These changes are affecting biodiversity ecosystem functioning and their complex interactions simultaneously However our ability to understand how genes individuals populations communities and ecosystems may respond to such changes is limited despite ecologists frequently being requested to provide policymakers and managers with predictions Indeed the species that composed biodiversity can establish complex trophic links between them in the ecosystems This structure of food webs is under the permanent constraint of community dynamics which connects species populations communities and ecosystems Therefore the response of food webs to perturbations can help ecologists to better understand the relationship between biological diversity and ecosystem functioning

Oaks Physiological Ecology. Exploring the Functional Diversity of Genus Quercus L. Eustaquio Gil-Pelegrín, José Javier Peguero-Pina, Domingo Sancho-Knapik, 2017-12-12 With more than 500 species distributed all around the Northern Hemisphere the genus Quercus L is a dominant element of a wide variety of habitats including temperate tropical subtropical and mediterranean forests and woodlands As the fossil record reflects oaks were usual from the Oligocene onwards showing the high ability of the genus to colonize new and different habitats Such diversity and ecological amplitude makes genus Quercus an excellent framework for comparative ecophysiological studies allowing the analysis of many mechanisms that are found in different oaks at different level leaf or stem The combination of several morphological and physiological attributes defines the existence of different functional types within the genus which are characteristic of specific phytoclimates From a landscape perspective oak forests and woodlands are threatened by many factors that can compromise their future a limited regeneration massive decline processes mostly triggered by adverse climatic events or the competence with other broad leaved trees and conifer species The knowledge of all these facts can allow for a better management of the oak forests in the future

Genomics, Functional, Evolutionary, and Ecological Perspectives on the Biology of Carnivorous Plants Magdy S. Alabady, Jim Leebens-Mack, Kenji Fukushima, Jeremy D. Rentsch, Russell L. Malmberg, 2024-12-13 Darwin was fascinated by the multitude of physiological and morphological adaptations of carnivorous plants and consequently referred to them as the most wonderful plants in the world The carnivorous behavior evolved independently at least six times in five angiosperm orders in plants that live in barren nutrient deficient environments Carnivorous plants capture insects to get access to the nitrogen and phosphorus contained in their bodies Their leaves are specialized to perform multiple functions secrete attractive scents capture insects secrete extracellular digestive enzymes absorb nutrients photosynthesize and develop symbioses Despite their independent origins there is a remarkable morphological convergence of the traps and physiological convergence of the mechanisms for digesting and assimilating prey These charismatic plants have evolved at least five major types of insect capturing mechanisms and can also be autotrophic under certain sentimental conditions These complex plants can be unique models for studying rapid organ movements excitability enzyme secretion nutrient absorption food web relationships phylogenetic and intergeneric relationships symbiosis cross species regulatory networks and convergent evolution The genomics revolution is giving us novel insights into the evolutionary history of these plants and the nature of their unique adaptations For instance the *U. gibba* genome reveals the role of small scale tandem duplications in the carnivorous adaptation a potential explanation of the

evolution of carnivorous traits such as attraction trapping digestions and absorption came from the genome of *C. follicularis* and a mapping population including F1 F2 and BC and their genetic linkage map have been developed for the *Sarracenia* species To increase our functional understanding of carnivorous plants further these findings need to be related to the unique properties of their habitats and interactions among plants with insects and microbes The multiple origins and evolutionary convergence of their specific nutrient economics renders carnivorous plants most interesting study systems in functional ecology Altogether these advances are ushering a new era of understanding of plant carnivory at genomics molecular and ecological functions and evolutionary levels

the diversity taxonomy and biology of the dung beetle species in the Neotropical region The structure of this Research Topic is composed of two sections In the first section articles may be original research papers or reviews on the knowledge of the dung beetles diversity in each country of the Neotropical region including species diversity and their response to land use and habitat fragmentation Articles on the second section may be original research papers or reviews on the following Research Topics Taxonomy of Neotropical dung beetles and their preservation in Institutional collections The methodology used to analyze the spatial distribution and monitoring of dung beetles The response of dung beetles to habitat loss and modification to the landscape in different countries and Neotropical biomes Cloud forest Tropical rain forest Subtropical forest Cerrado Caatinga Paramo Pampa Pantanal and others The physiological responses of dung beetles to anthropogenic disturbance in the Neotropics The biology and reproductive behavior of Neotropical dung beetles The genetics of Neotropical dung beetle Dung beetle interaction with other species and its role as a secondary dispersal The relationship between dung beetles and Mesoamerican cultures
