Architectural Principles In The Age Of Humanism:

Architectural Principles in the Age of Humanism Rudolf Wittkower, 1988 **Architectural Principles in the Age of Humanism. (Second Edition.).** Rudolf Wittkower, 1952 Architectural Principles in the Age of Humanism 2nd Ed, 1952 **Rudolf Wittkower, Architectural Principles in the Age of Humanism** Henry A. Millon, 1972 *Architectural Principles of the Age of Humanism Applied* Humberto L. Rodríguez-Camilloni, 1969 **The Projective Cast** Robin Evans, 2000-08-25 Robin Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form Anyone reviewing the history of architectural theory Robin Evans observes would have to conclude that architects do not produce geometry but rather consume it In this long awaited book completed shortly before its author s death Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form He shows that geometry does not always play a stolid and dormant role but in fact may be an active agent in the links between thinking and imagination imagination and drawing drawing and building He suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings largely in Europe from the fifteenth to the twentieth century From the Henry VII chapel at Westminster Abbey to Le Corbusier s Ronchamp from Raphael s S Eligio and the work of Piero della Francesca and Philibert Delorme to Guarino Guarini and the painters of cubism Evans explores the geometries involved asking whether they are in fact the stable underpinnings of the creative intuitive or rhetorical aspects of architecture In particular he concentrates on the history of architectural projection the geometry of vision that has become an internalized and pervasive pictorial method of construction and that until now has played only a small part in the development of architectural theory Evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need suggesting that there is much more within the scope of the architect s vision of a project than what can be drawn He defines the different fields of projective transmission that concern architecture and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors

Architecture Principles in the Age of Humanism Rudolf Wittkower, 1974 Architectural Principles in the Age of Cybernetics Christopher Hight, 2007-12-12 A theoretical history of anthropomorphism and proportion in modern architecture this volume brings into focus the discourse around proportion with current problems of post humanism in architecture alongside the new possibilities made available through digital technologies The book examines how the body and its ordering has served as a central site of architectural discourse in recent decades especially in attempts to reformulate architecture s relationship to humanism modernism and technology Challenging some concepts and categories of architectural history and situates current debates within a broader cultural and technological context Hight makes complex ideas easily accessible

Extensively illustrated and written without academic jargon for an informed but non specialized architectural audience this book elucidates the often obscure debates of avant garde architectural discourse and design while demonstrating how these debates have affected everyday places and concepts of architecture As a result it will appeal to professional architects academics and students combining as it does an insightful introduction to the fundamental issues of architectural history and theory over the past fifty years with entirely new formulations of what that history is and means Rudolf Wittkower,

Architectural principles in the age of humanism. [Review]. James S. Ackerman, **The birth of modern London**

,2021-02-23 The period 1660 1720 saw the foundation of modern London The city was transformed post Fire from a tight warren of medieval timber framed buildings into a vastly expanded regularised landscape of brick houses laid out in squares and spacious streets This work for the first time examines in detail the building boom and the speculative developers who created that landscape It offers a wealth of new information on their working practices the role of craftsmen and the design thinking which led to the creation of a new prototype for English housing The book concentrates on the mass produced houses of the middling sort which saw the adoption of classicism on a large scale in this country for the first time McKellar shows however that the new city maintained a surprising degree of continuity with existing patterns of urban used and traditional architecture The book presents the late seventeenth and the early eighteenth century as a distinct phase in London s architectural development and offers a radical reinterpretations of the adoption of Renaissance styles and ideas at the level of the everyday challenging conventional interpretations of their use and reception in this country A Palladian

Minai, 2017-03-20 No detailed description available for Architecture as Environmental Communication Frank Lloyd Wright Paul Laseau, James Tice, Frank Lloyd Wright, 1992 Despite the renewed interest in Frank Lloyd Wright and the increasing body of literature that has illuminated his career the deeper meaning of his architecture continues to be elusive His own writings are often interesting commentaries but tend not to enlighten us as to his design methodology and it is difficult to make the connection between his stated philosophy and his actual designs This book is a refreshing account that evaluates Wright s contribution on the basis of his architectural form its animating principle and consequent meaning Wright s architecture not his persona is the primary focus of this investigation This study presents a comprehensive overview of Wright s work in a comparative

analytical format Wright's major building types have been identified to enable the reader to pursue a more systematic understanding of his work. The conceptual and experiential order of each building group is demonstrated visually with specially developed analytical illustrations. These drawings offer vital insights into Wright's exploration of form and underscore the connection between form and principle. The implications of Wright's work for architecture in general serves as an important underlying theme throughout. This volume also integrates the research of several noted scholars to clarify the interaction of theory and practice in Wright's work as well as the role of formal order in architectural experience in general. By seeing how Wright integrates his intuitive and intellectual grasp of design, the reader will build a keen awareness of the rational and coherent basis of his architecture and its symbiotic relationship with emotional qualitative reality. A graphic taxonomy of plans of Wright's building designs helps the reader focus on specific subjects. Among the diverse areas covered are sources and influences of Wright's work, domestic themes and variations, public buildings and skyscraper designs, and the influence of site on design. Complete with a chronology of the master architect's work, *Frank Lloyd Wright: Between Principle and Form* is an important reference for students, architects, and architectural historians.

The Architecture of Edwin Maxwell Fry and Jane Drew Iain Jackson, Jessica Holland, 2016-03-16 Maxwell Fry and Jane Drew were pioneers of Modern Architecture in Britain and its former colonies from the late 1920s through to the early 1970s. As a barometer of twentieth-century architecture, their work traces the major cultural developments of that century from the development of modernism, its spread into the late colonial arena, and finally to its re-evaluation that resulted in a more expressive formalist approach in the post-war era. This book thoroughly examines Fry and Drew's highly influential Tropical Architecture in West Africa and India, whilst also discussing their British work such as their post-World War II projects for the Festival of Britain, Harlow New Town, Pilkington Brothers Headquarters, and Coychurch Crematorium. It highlights the collaborative nature of Fry and Drew's work, including schemes undertaken with Elizabeth Denby, Walter Gropius, Denys Lasdun, Pierre Jeanneret, and Le Corbusier. Positioning their architecture, writing, and educational endeavours within a wider context, this book illustrates the significant artistic and cultural contributions made by Fry and Drew throughout their lengthy careers.
