

Lesson 10

CHEMISTRY SUBJECT TEST

The Chemistry Subject Test consists of 85 multiple-choice questions. In terms of its overall level of difficulty, the test is intended for students who have had a one-year introductory course in chemistry of the sort that is included in a college preparatory curriculum.

The following table summarizes the topics tested and the approximate number of questions for each:

Topics Tested	Approximate Percentage of Test
Structure of Matter	25
States of Matter	15
Reaction Types	14
Stoichiometry	12
Equilibrium and Reaction Rates	7
Thermodynamics	6
Descriptive Chemistry	13
Laboratory	8

Although 85 questions is a lot to answer in an hour, that is not a large number of questions when compared with the amount of information that is conveyed in a full-year course in chemistry. For this reason, not everything you learned in chemistry can be the basis for a test question. Conversely, you may encounter some questions that test areas not emphasized in your course. The outline of important concepts (below) is intended to help you refresh your memory in a general way about the concepts you learned in your chemistry course.

QUESTIONS USED IN THE CHEMISTRY SUBJECT TEST

The Chemistry Test uses several different question formats, and you should be familiar with these before you do the practice test contained in this book.
