American X-Vehicles Dennis R. Jenkins, Nasa Technical Reports Server (Ntrs), Et Al, 2013-06 For a while it seemed the series of experimental aircraft sponsored by the U S government had run its course Between the late 1940s and the late 1970s almost thirty designations had been allocated to aircraft meant to explore new flight regimes or untried technologies Then largely it ended But there was a resurgence in the mid to late 1990s and as we enter the fourth year of the new millennia the designations are up to X 50 Many have a misconception that X vehicles have always explored the high speed and high altitude flight regimes something popularized by Chuck Yeager in the original X 1 and the exploits of the twelve men that flew the X 15 Although these flight regimes have always been in the spotlight many others have been explored by X vehicles The little Bensen X 25 never exceeded 85 mph and others were limited to speeds of several hundred mph There has been some criticism that the use of X designations has been corrupted somewhat by including what are essentially prototypes of future operational aircraft especially the two JSF demonstrators But this is not new the X 11 and X 12 from the 1950s were going to be prototypes of the Atlas intercontinental ballistic missile and the still born Lockheed X 27 was always intended as a prototype of a production aircraft So although this practice does not represent the best use of X designations it is not without precedent

Hersch, 2023-12-26 A captivating history of NASA's Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In *Dark Star* Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA's space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle's fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft *Dark Star* reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became

available to eliminate its obvious flaws Hersch's work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build Realizing the Dream of Flight Virginia Parker Dawson, Mark D.
