Sample Preparation in Chromatography S.C. Moldoveanu, V. David, 2002-05-08 Sample preparation is an essential step in many analyses This book approaches the topic of sample preparation in chromatography in a methodical way viewing it as a logical connection between sample collection and analytical chromatography Providing a guide for choosing the appropriate sample preparation for a given analysis this book describes various ways to process the sample explaining the principle discussing the advantages and disadvantages

describing the applicability to different types of samples and showing the fitness to specific chromatographic determinations The first part of the book contains an overview of sample preparation showing its relation to sample collection and to the core chromatographic analysis The second part covers procedures that do not use chemical modifications of the analyte and includes methods for sample dissolution concentration and cleanup designed mainly for modifying the initial matrix of the sample This part starts with conventional separations such as filtration and distillation and finishes with more advanced techniques such as solid phase extraction and electroseparations The third part gives a description of the chemical modifications that can be performed on a sample either for fractionation purposes or to improve a specific property of the analyte This part includes derivatizations polymer chemical degradations and pyrolysis

Protein Identification by Mass Spectrometry Willy Vincent Bienvenut, 2005-04-19 At present where protein identification and characterisation using mass spectrometry is a method of choice this book is presenting a review of basic proteomic techniques The second part of the book is related to the novel high throughput protein identification technique called the molecular scanner Several protein identification techniques are described especially the peptide mass fingerprint with MALDI MS based method E g ionisation process matrix available signal reproducibility and suppression effect as well as data treatment for protein identification using bioinformatics tools

Mass Spectrometry and Genomic Analysis J.N.

Housby, 2001-10-31 The human genome project is set to revolutionise health care and medicine in the near future The genetic make up of each individual gives clues as to the genetic factors that predispose one to a particular genetic disease Single Nucleotide Polymorphisms SNPs single base changes in the nucleotide DNA sequence of individuals are thought to be the main cause of genetic variation By comparing patterns of SNP allele frequencies between disease affected and control populations disease associated SNPs can be identified and potential disease genes located These types of study necessitate genotyping of thousands of SNPs which requires the use of powerful high throughput systems of analysis Mass spectrometry is fast becoming the preferred technology for this type of high throughput analysis This book contains a collection of descriptions of some of the most outstanding advances in the field of mass spectrometry from which I hope the reader will be able to learn both the principles and the most up to date methods for its use in genomic analysis It covers the general principles of the technologies and more in depth detailed descriptions for more academic reading and information Audience Whether you are a student a post doctoral researcher or experienced MS user this book will be a stimulating addition to the analytical arena of mass spectrometry and genomic analysis
