

A top-down view of a wooden desk. In the upper right, a silver laptop is partially visible. Next to it is a white mug filled with a golden-brown beverage. Below the mug, several papers are scattered. One paper has a blue header with the name 'SARANTHA BLACK' and a small blue circular logo. Another paper features a colorful bar chart with bars in blue, red, and yellow. The text 'ARBITRAGE', 'SPECULATION', and 'HEDGING' is overlaid in large, bold, black capital letters across the center of the image.

*Microeconomic Risk*

*Management and Macroeconomic Stability* Andreas Röthig, 2009-08-02 The essence of a hedging contract is a coincident purchase and sale in two markets which are expected to behave in such a way that any loss realized in one will be offset by an equivalent gain in the other If such behavior follows a perfect hedge has been effected Hardy and Lyon 1923 p 276 1 1 Literature Review and Motivation In the traditional hedging literature the two markets in which hedgers trade are spot and futures markets The trader's position in the spot market is generally considered as given According to Johnson 1960 hedging can be meaningfully defined only if the spot market is regarded as the trader's primary market The futures market is used solely to counterbalance an existing position in the spot market Speculators in contrast do not have a commitment in the spot market They take on risk in futures markets in order to protect from expected price changes The hedger synchronizes his trading activities in spot and futures markets in order to reduce spot risk In the literature this approach to hedging is labeled risk reduction concept Risk reduction will be achieved if spot and futures prices move more or less in parallel If prices are perfectly correlated risk is abolished since losses in one market are perfectly offset by profits in the other market However as Hardy and Lyon 1923 point out any divergence from perfect correlation results in an imperfect hedge
