**Special Topics in Policing** James F. Albrecht, Garth den Heyer, 2024-04-22 This book comprehensively examines five key areas of concern across the field of policing. These critical issues include police use of force, police ethics and integrity, traffic safety, police community collaboration, and optimizing organizational performance and service delivery. The chapters that follow provide a global, multi-faceted approach to analyze these core professional issues, examine them through sociological and theoretical lenses, and ultimately propose policy recommendations to ensure optimal professionalism and organizational effectiveness. The book focuses on issues including: Enhancing public trust and confidence, Effective crime control, Rule of law, Social justice, Best procedures and practices. This book is ideal for upper level undergraduate and graduate level students, criminal justice and law enforcement practitioners, and policy makers and criminal justice and criminology researchers.

**Oxford Studies in Metaethics** Russ Shafer-Landau, 2010 *Semiotics in Information Systems Engineering* Kecheng Liu, 2000-05-11 Semiotics, the science of signs, has long been recognised as an important discipline for understanding information and communications. Moreover, it has found wide application in other areas of computer science as it offers an effective insight into organisations and the computer systems that support them. An organisation may be viewed as a system of information and communication in which human actors, with the assistance of information technology, are able to process, represent, store, and consume information. Computer systems that fit into an organisation and that support and enhance its performance and competitiveness can be better delivered if semiotic principles are understood and applied. In this book, first published in 2000, semiotic methods are introduced and illustrated through three major case studies which demonstrate how information systems can be developed to meet business requirements and support business objectives. It will appeal to academics, systems developers, and analysts.

**Advancements in Gel Science—A Special Issue in Memory of Toyochi Tanaka** Masayuki Tokita, 2019-08-19 A gel is a state of matter that consists of a three-dimensional cross-linked polymer network and a large amount of solvent. Because of their structural characteristics, gels play important roles in science and technology. The science of gels has attracted much attention since the discovery of the volume phase transition by Professor Toyochi Tanaka at MIT in 1978. MDPI planned to publish a Special Issue in Gels to celebrate the 40th anniversary of this discovery, which received submissions of 13 original papers and one review from various areas of science. We believe that readers will find this Special Issue informative as to the recent advancements of gel research and the broad background of gel science.

**Austinian Themes** Marina Sbisa, 2024-06-27 Austinian Themes offers a reconstruction of philosophical views on several themes developed by J. L. Austin. Exploring Austin's work in detail through a series of thematically organized chapters, Marina Sbisa draws on both published work as well as unpublished manuscript notes to offer a defence of Austin's speech act theory, characterized by a specific notion of illocution, against some important criticisms. Sbisa offers a reconstruction of Austin's responsibility-based conception of action, drawing on his remarks on acts and actions in

How to Do Things with Words and in later papers Exploring Austin's contributions to epistemology and the philosophy of perception including his realist stance anti scepticism and presentational view of perception Sbis analyses the roles that he assigns to knowledge in the dynamics of assertion On the theme of truth Austin's claims are expounded and explained as worthy of reassessment Other chapters explore the ways in which Austin deals with sense reference family resemblances truth falsity assessments and context dependence Austin's most famous statement of method as outlining a linguistic phenomenology is cast as analogous to Husserl's phenomenology in adopting an epoch which isolates language rather than consciousness a reading which helps to clarify several characteristic positions adopted by Austin On metaphilosophical themes Sbis analyses the notion of ordinariness distinguishing it from common sense and the endorsement of the Linguistic Turn approaching it instead in terms of the by default nature of the social bond and conversational cooperation Various recurrent aspects of Austin's philosophy are illuminated the opposition to dichotomies the attention paid to intersubjectivity the commitment to a sober philosophy and a strong sense of human situatedness

Agents and Peer-to-Peer Computing Gianluca Moro, Sonia Bergamaschi, 2005-11-04 Peer to peer P2P computing is attracting enormous media attention spurred by the popularity of file sharing systems such as Napster Gnutella and Morpheus The peers are autonomous or as some call them first class citizens P2P networks are emerging as a new distributed computing paradigm for their potential to harness the computing power of the hosts composing the network and make their under utilized resources available to others Although researchers working on distributed computing multiagent systems databases and networks have been using similar

concepts for a long time it is only recently that papers motivated by the current P2P paradigm have started appearing in high quality conferences and workshops Research in agent systems in particular appears to be most relevant because since their inception multiagent systems have always been thought of as networks of peers The multiagent paradigm can thus be superimposed on the P2P architecture where agents embody the description of the task environments the decision support capabilities the collective behavior and the interaction protocols of each peer The emphasis in this context on decentralization user autonomy ease and speed of growth that gives P2P its advantages also leads to significant potential problems Most prominent among these problems are coordination the ability of an agent to make decisions on its own actions in the context of activities of other agents and scalability the value of the P2P systems lies in how well they scale along several dimensions including complexity heterogeneity of peers robustness traffic redistribution and so on This volume presents the fully revised papers presented at the Third International Workshop on Agents and Peer to Peer Computing AP2PC 2004 held in New York City on July 19 2004 in the context of the Third International Joint Conference on Autonomous Agents and Multi Agent Systems AAMAS 2004 The volume is organized in topical sections on P2P networks and search performance emergent communities and social behaviours semantic integration mobile P2P systems adaptive systems agent based resource discovery as well as trust and reputation
