## **Assessing And Treating Low Incidence/high Severity Psychological Disorders Of Childhood:**

*Assessing and Treating Low Incidence/High Severity Psychological Disorders of Childhood* Stefan C. Dombrowski, Karen L. Gischlar, Martin Mrazik, 2011-07-08 During the past several decades interest in children's psychological disorders has grown steadily within the research community resulting in a burgeoning knowledge base. The majority of the attention and funding not surprisingly has focused on the more prevalent and well known conditions. Although this raises the odds that young people with more well known disorders such as ADHD, autism, and learning disorders will receive much needed professional assessment and intervention, children with less frequently encountered disorders may experience a higher risk of misdiagnosis and inappropriate treatment. Useful data has been scattered throughout the literature for severe but less frequent childhood psychological disorders including fire setting, gender identity disorder, impulse control disorders, kleptomania, trichotillomania, intermittent explosive disorder, selective mutism, Munchausen by proxy, childhood schizophrenia, gang involvement, sexual offending, self-injurious behavior, and feral children. This concise volume offers up-to-date information on these conditions which, though relatively rare, may have profound effect not only on the children themselves but also their families, friends, and the community at large. Coverage of each disorder is presented in an accessible format covering Overview and history, Description and diagnostic classification with proposed changes to the DSM-V, Etiology and theory, Assessment tools and interview protocols, Commonly used psychological and pharmacological treatment options, Current research issues, and directions for future investigation. *Assessing and Treating Low Incidence High Severity Psychological Disorders of Childhood* is a must-have reference for researchers, clinicians, practitioners, and graduate students in clinical child and school psychology, pediatrics, psychiatry, social work, school counseling, education, and public policy.

**Psychoeducational Assessment and Report Writing** Stefan C. Dombrowski, 2014-11-10 This textbook provides in-depth instruction for conducting psychoeducational assessments of children in grades K-12 and conveying results through detailed, well-written reports. It takes readers step by step through the assessment process: collecting data, writing reports, and communicating conclusions for students with conditions spanning the range of IDEA classifications such as autism, learning disabilities, emotional disturbances, and conditions covered by Section 504. The book offers not only a broad understanding of assessment and communication skills but also of the ethical, legal, cultural, and professional considerations that come with psychoeducational evaluation. And its sample reports model clear, well-organized results accessible to parents and caregivers as well as teachers and colleagues. Key areas of coverage include: Assessment basics, the testing environment, and protocols; interviewing and observation; Report writing section by section from reason for referral to summary and recommendations; Guidelines for oral reporting with case examples; Special issues in psychoeducational assessment and report writing; Sample psychoeducational reports using this framework. *Psychoeducational Assessment and Report Writing* is an essential text for graduate students, researchers, professors, and professionals in child and school psychology, assessment, testing, and evaluation.

Age and the Reach of Sociological Imagination Dale Dannefer, 2021-08-09 The dominant narratives of both science and popular culture typically define aging and human development as self contained individual matters failing to recognize the degree to which they are shaped by experiential and contextual contingencies Our understandings of age are thereby boxed in and constricted by assumptions of normality and naturalness that limit our capacities to explore possible alternative experiences of development and aging and the conditions both individual and social that might foster such experiences Combining foundational principles of critical social science with recent breakthroughs in research across disciplines ranging from biology to economics this book offers a scientifically and humanly expanded landscape for apprehending the life course Rejecting familiar but false dichotomies such as nature vs nurture and structure vs agency it clarifies the organismic fundamentals that make the actual content of experience so centrally important in age and development and it also explores why attention to these fundamentals has been so resisted in studies of individuals and individual change and in policy and practice as well In presenting the basic principles and reviewing the current state of knowledge Dale Dannefer introduces multi levelled social processes that shape human development and aging over the life course and age as a cultural phenomenon organizing his approach around three key frontiers of inquiry that each invite a vigorous exercise of sociological imagination the Social Structural Frontier the Biosocial Frontier and the Critical Reflexive Frontier

Vinson, Ebony S. Vinson, 2018-09-12 The purpose of this book is to provide a children's mental health resource tailored to the needs of physicians working with children. There are currently no such texts despite the fact that there are patient care healthcare systems and workforce factors that indicate a strong need for such a resource. Approximately 1 in 5 children are diagnosed with a mental illness by the age of 18. Additionally, mental health conditions including Attention Deficit Hyperactivity Disorder are consistently among the most common chronic conditions in pediatric clinical populations. Delays in both diagnosis and treatment increase the morbidity associated with these conditions. These delays expose the child to negative ramifications of his/her illness and can impact rates of poor academic performance, substance use disorders, and criminal justice system involvement, potentially impacting long-term life trajectories. Early identification of mental illness and appropriate intervention is critical to the healthy development of youth, though physicians in primary care and pediatrics are seldom trained to detect and treat such illnesses. The importance of recognizing mental illness is reflected in practice guidelines for pediatric primary care providers as well as in how service delivery is being structured, but this does not offer in-depth clinical guidelines. Additionally, integrated care and medical home models include mental health as key components, though yet again physicians are often not trained to work with these models. While clearly indicated clinically, these requirements do not come with significant increases in reimbursement and are added to an already demanding schedule. Increasingly, providers are also expected to use evidence-based screening instruments without exposure to this body of literature. Some guidance on using those instruments in context will help them to use those tools more effectively. Finally, primary care providers and even some adult psychiatrists and psychologists are operating in a healthcare system with a severe nationwide shortage of child and adolescent psychiatrists and mental healthcare providers. While a text certainly cannot single-handedly compensate for such a workforce shortage, it could potentially help to mitigate the negative impact on patients by facilitating early identification and treatment in the primary care setting. Additionally, with more effective treatment in pediatric settings, less complex cases may be addressed before specialty care is needed, and the expertise of child and adolescent psychiatrists can be more effectively used for more complex cases. *Pediatric Psychiatry in Primary Care* is the ultimate resource for clinicians working with children, including pediatricians, family physicians, general psychiatrists, psychologists, early career child psychiatrists, social workers, nurses, school counselors, and all clinical professionals who may encounter children struggling with psychiatric disorders.
