Asthma Guidelines:

Clinical Asthma Jonathan A. Bernstein, Mark L. Levy, 2014-02-06 Enormous progress in asthma research has been made in the past 50 years including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world renowned authors *Clinical Asthma Theory and Practice* presents a comprehensive study of both the common and the more challenging problems faced by all health care personnel who treat patients with asthma. The book is divided into seven sections starting with the basics of asthma and ending with a discussion on the approach to asthma worldwide and in the primary care setting. Reflecting a strong clinical emphasis each chapter begins with a patient case study supported by essential background information on the basic science and clinical decision making process. This is followed by a discussion of clinical evaluation and management. The multidisciplinary coverage explores a range of topics including genetics, inflammation, immunology and the identification of different endotypes. Using a bench to bedside approach the book links basic science to the clinical management of asthma and explores options for improvement. The carefully selected authorship from experts worldwide presents a truly global outlook. *ABC of Asthma* John Rees, Dipak Kanabar, Shriti

The *ABC of Asthma* is a concise up to date overview of all aspects of asthma and includes two new chapters focussing on GP practice issues including clinical management and organisation of asthma care. It is ideal for GPs, junior doctors and medical students, nurses and anyone dealing with the treatment of asthma in children and adults. **Diagnosis, Prevention and Treatment of**

Giacco, 2005-11-01 Asthma and allergy represent increasing problems for the actively competing athlete. The prevalence of exercise induced asthma (EIA) has increased over the last two decades especially amongst elite endurance athletes. It has been reported that high level endurance training in particular may increase bronchial hyperresponsiveness (BHR) and cause inflammation in the airways. Intensive endurance training and competition together with environmental influences are thought to be causative factors. For winter sports inhaled cold air represents such an environmental factor.
