Quantum physics and the theory of relativity have shaken our conception of reality They have made us realize that the universe is not as we perceive it Religion and philosophy have so far failed to adapt our view of the world on the basis of these findings Thus together with the reader the author sets out to clarify the fundamental questions of life He skillfully juxtaposes convincing answers from different fields of knowledge Scientific chapters about the world of quantum objects space and time or the origin and evolution of the universe stand in stark contrast to chapters about scientifically unexplainable events such as miracles spiritualistic phenomena findings about life after death and reincarnation In addition the author discusses the atheistic worldview The scientific sections are easily understandable especially since they are to a large extent free of technical terms and formulas In the religious chapters the author draws parallels between ideas from all religions especially Hinduism Buddhism and Taoism and scientific findings Descriptions of the God experiences of spiritual masters from all times cultures and religions as well as personal anecdotes and stories imagined by the author provide manifold paradigm shifts in the detailed consideration of one and the same thing the ultimate reason of our existence and the meaning of life

Research Handbook on the Economics of Criminal Law Alon Harel, Keith N. Hylton, 2012-01-01 Jeremy Bentham and Gary Becker established the tradition of analyzing criminal law in utilitarian and economic terms This seminal book continues that tradition with specially commissioned original papers that span the philosophical foundations of the use of economics in criminal law both traditional economic perspectives and behavioral and experimental approaches to the discipline The

contributors examine and evaluate the optimal design of criminal law norms as well as the ideal structure of law enforcement institutions They delineate what wrongs ought to be criminalized identify the boundaries between criminal law and tort and determine the optimal size of sanctions given the differential vulnerability of victims They also analyze the special considerations that apply to the regulation of corporate crime the effects of technology on crime and the effects of the distribution of wealth on sentencing This essential Handbook provides students and scholars of criminal law and law and economics the opportunity to explore the diversity of contemporary approaches to the economics of crime Criminologists sociologists and policymakers will also find it a valuable addition to their collections

The Nature of Order, Book Two: The Process of Creating Life Christopher Alexander, 2020-03-30 Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most capable of supporting life The process of creation whether in the formation of a single object or in the piecemeal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations
