Your best friend for real life scenarios.

INTRODUCTION

A flight management system (FMS) or flight management computer (FMC) is a flight-related computer or a subsystem that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that during long haul flight operations pilots can often go into a controlled sleep.

A primary function is to flight management of the flight plan. Using various sensors such as GPS and IRS to determine the aircraft's current and next-of-position in the world. The FMC is normally controlled through a Control Display Unit (CDU) which incorporates a small screen and keypad. The FMC also work with a required flight plan data to other instruments such as the FFD for better accuracy.

The Vortex and The Jet Reiner Decher,2022-02-25
This open access book is an introduction for the lay reader to understand the basics of flight The exposure is to the mysteries of lift generation by wings and the basic function of the jet propulsion engine The text relies on simple descriptions of the physics of air flow without unduly involving mathematics The text is richly illustrated with sketches and photographs to enrich verbal descriptions The book takes the viewpoint that a reader does not have a background in the engineering of airplane components but is interested in the subject The description is in terms of easy to understand terminology occasional use of humor references to everyday experiences and occasionally to an algebraic relationship when that is unavoidable This book would serve a student aspiring to be an engineer to begin grappling with the phenomena involved and the techniques used to analyze these phenomena The practitioner as well as the beginner in the art of flying an airplane is well served with the knowledge exposed here The text makes no apology for technical complexity Its introduction is rigorous and provides a sound footing for further study
