Must Love Trees Tobin Mitnick, 2023-03-28 Tobin Mitnick, *Jews Love Trees* creator and shameless tree lover leads you the tree curious through the wonderful world of North American trees with fact, opinion, and humor. In *Must Love Trees*, Mitnick invites you to share his deeply personal connection to our forest companions in ways that expand the storied genre of nature writing. From an imagined dialogue with the world's oldest bristlecone pine to the minutiae of tree huggability to the emotional toll of taking up the practice of bonsai, this fresh take into the world of trees is divided into three equally humorous and insightful sections. The first section discusses Mitnick's personal opinions and relationship with trees, while the second section describes the science behind trees from tree botany to tree biology to tree ecology. In the final section, Mitnick answers the question: Who would these trees be if they all attended high school together? Tobin's detailed description of a tree in action and his thorough run-down of our most treasured North American trees, all 100 of whom happen to be classmates at Tree High North America, makes this compilation an original and occasionally outlandish guide for both the budding and seasoned tree lover. *Must Love Trees* features beautiful drawings of a vast selection of North American trees, including renowned icons like the Coast Redwood (*Sequoia sempervirens*), beloved favorites like the Southern Magnolia (*Magnolia grandiflora*), historical tragedies like the American Chestnut (*Castanea dentata*), menacing creepers like Poison Sumac (*Toxicodendron vernix*), and unsung wonders like the Common Paw Paw (*Asimina triloba*). Part textbook, part memoir, and part comedy, *Must Love Trees* is the most complete and most unconventional story of our forest pals ever told.

Twelve Trees Daniel Lewis, 2025-03-11 A compelling global exploration of nature and survival as seen via a dozen species of trees that represent the challenges facing our planet and the ways that scientists are working urgently to save our forests and our future. The world today is undergoing the most rapid environmental transformation in human history, from climate change to deforestation. Scientists, ethnobotanists, indigenous peoples, and collectives of all kinds are closely studying trees and their biology to understand how and why trees function individually and collectively in the ways they do. In *Twelve Trees*, Daniel Lewis, curator and historian at one of the world's most renowned research libraries, travels the world to learn about these

trees in their habitats Lewis takes us on a sweeping journey to plant breeding labs botanical gardens research facilities deep inside museum collections to the tops of tall trees underwater and around the Earth journeying into the deserts of the American west and the deep jungles of Peru to offer a globe spanning perspective on the crucial impact trees have on our entire planet When a once common tree goes extinct in the wild but survives in a botanical garden what happens next How can scientists reconstruct lost genomes and habitats How does a tree store thousands of gallons of water or offer up perfectly preserved insects from millions of years ago or root itself in muddy swamps and remain standing How does a 5 000 year old tree manage to live and what can we learn from it And how can science account for the survival of one species at the expense of others To study the science of trees is to study not just the present but the story of the world its past and its future Note species include The Lost Tree of Easter Island *Sophora toromiro* The coast redwood *Sequoia sempervirens* *Hymenaea protera* a fossil tree The Longleaf pine *Pinus palustris* East Indian sandalwood *Santalum album* The Bristlecone pine *Pinus longaeva* West African ebony *Diospyros crassiflora* The Tasmanian blue gum eucalyptus *Eucalyptus globulus* Olive tree *Olea europaea* Baobab *Adansonia digitata* the kapok tree *Ceiba pentandra* The bald cypress *Taxodium distichum*
