Adapting Institutions Governance Complexity And Social Ecological Resilience:

Adapting Institutions Emily Boyd, Carl Folke, 2011-10-27 Global environmental change is occurring at a rate faster than humans have ever experienced. Climate change and the loss of ecosystem services are the two main global environmental crises facing us today. As a result, there is a need for better understanding of the specific and general resilience of networked ecosystems, cities, organisations, and institutions to cope with change. In this book, an international team of experts provide cutting edge insights into building the resilience and adaptive governance of complex social ecological systems. Through a set of case studies, it focuses on the social science dimension of ecosystem management in the context of global change, in a move to bridge existing gaps between resilience, sustainability, and social science. Using empirical examples ranging from local to global levels, views from a variety of disciplines are integrated to provide an essential resource for scholars, policy makers, and students seeking innovative approaches to governance.

Handbook of Sustainability and Social Science Research Walter Leal Filho, Robert W. Marans, John Callewaert, 2017-10-26 In this handbook, social science researchers who focus on sustainability present and discuss their findings, including empirical work, case studies, teaching and learning innovations, and applied projects. As such, the book offers a basis for the dissemination of information, ideas, and experiences acquired in the execution of research projects, especially initiatives which have influenced behavior, decision making, or policy. Furthermore, it introduces methodological approaches and projects which aim to offer a better understanding of sustainability across society and economic sectors. This multidisciplinary overview presents the work of researchers from across the spectrum of the social sciences. It stimulates innovative thinking on how social sciences influence sustainable development and vice versa.

Governing the Anthropocene Sarah Clement, 2020-12-19 This book focuses on the present and future challenges of managing ecosystem transformation on a planet where human impacts are pervasive. In this new epoch, the Anthropocene, the already rapid rate of species loss is amplified by climate change and other

stress factors causing transformation of highly valued landscapes Many locations are already transforming into novel ecosystems where new species interactions and ecological functions are creating landscapes unlike anything seen before This has sparked contentious debate not just about science but about decision making responsibility fairness and human capacity to intervene Clement argues that the social and ecological reality of the Anthropocene requires modernised governance and policy to confront these new challenges and achieve ecological objectives There is a real opportunity to enable society to cope with transformed ecosystems by changing governance but this is notoriously difficult Aimed at anyone involved in these conversations be those researchers practitioners decision makers or students this book brings together diffuse research exploring how to confront institutional change and ecological transformation in different contexts and provides insight into how to translate governance concepts into productive pathways forward

Ecological Governance

Olivia Woolley, 2014-11-06 Ecological degradation has been an object of concern for the international community since the early 1970s but legal approaches that have been employed to improve the protection of ecosystems have failed to halt this decline Ecological Governance explores how the law should respond to this rapid global deterioration of ecosystems by examining the foundational scientific and ethical considerations for designing laws that are effective for ecological protection Based on these analyses it argues that developed states should prioritise the reduction of the ecological stresses for which they are responsible in decision making on their future courses The author also proposes structures for governance and associated legal frameworks that would enable the formulation and implementation of policies for ecological sustainability

Redeeming REDD Michael I. Brown, 2013-06-26 It is now well accepted that deforestation is a key source of greenhouse gas emissions and of climate change with forests representing major sinks for carbon As a result public and private initiatives for reducing emissions from deforestation and forest degradation REDD have been widely endorsed by policy makers A key issue is the feasibility of carbon trading or other incentives to encourage land owners and indigenous people particularly in developing tropical countries to conserve forests rather than to cut them down for agricultural or other development purposes This book presents a major critique of the aims and policies of REDD as currently structured particularly in terms of their social feasibility It is shown how the claims to be able to reduce greenhouse gas emissions as well as enhance people's livelihoods and biodiversity conservation are unrealistic There is a naive assumption that technical or economic fixes are sufficient for success However the social and governance aspects of REDD and its enhanced version known as REDD+ are shown to be implausible Instead to enhance REDD's prospects the author provides a roadmap for developing a new social contract that puts people first

Urban Commons Christian Borch, Martin Kornberger, 2015-04-10 This book rethinks the city by examining its various forms of collectivity their atmospheres modes of exclusion and self organization as well as how they are governed on the basis of a critical discussion of the notion of urban commons The idea of the commons has received surprisingly little attention in urban theory although the city may well be conceived as a shared resource Urban Commons Rethinking the City offers an attempt to reconsider what a city might be by studying how the notion of the commons opens up new understandings of urban collectivities addressing a range of questions about urban diversity urban governance urban belonging urban sexuality urban subcultures and urban poverty but also by discussing in more methodological terms how one might study the urban commons In these respects the rethinking of the city undertaken in this book has a critical dimension

as the notion of the commons delivers new insights about how collective urban life is formed and governed **The Physics of the Law: Legal Systems Through the Prism of Complexity Science** Pierpaolo Vivo, Daniel Martin Katz, J. B.
